

London, with suburbs, now contains over 45,000 inhabitants, and is rapidly increasing in size. It is also surrounded by the most densely populated farming community in the Province, so that the number of patients admitted to the Hospital furnishes a large and varied number of cases for Clinical study, which will be conducted in such a manner as to afford each student frequent opportunities of personally examining patients. The London General Hospital contains 104 beds, which are frequently all full, and the Training School in connection with the Hospital secures the best system of nursing. The students will also have the opportunity of visiting the Dispensary (in the school building) daily, and seeing and examining a number of out-door patients. Clinical Clerks and Surgical Dressers will be appointed from among the advanced students, who will take notes of cases and report the same on printed forms supplied for the purpose.

During this course the use is taught also of the Ophthalmoscope, Laryngoscope, Sphygmograph and other instruments of precision used in medical and surgical diagnosis.

According to a regulation of the Medical Council, students are required to attend the practice of a General Hospital for a period of twenty-four months.

The several medical charities of the city also afford material for practical instruction, and the advanced students will have the opportunity of visiting, with the Surgeon in attendance, and assisting at operations, etc. The principal charities are:—The Mount Hope Orphan Asylum, the Protestant Orphan Home, the Convalescent Home, the Old Men's Home, St. Joseph's Hospital, etc.

A free 'bus will convey the Students to the Asylum for the Insane, during the course on Diseases of the Mind.

The London Asylum for the Insane at the present time contains 904 patients, so that the student has every opportunity for receiving instruction on this important subject.

CLINICAL MEDICINE.

PROFESSOR ARNOTT.

The method in this subject consists of questions and answers on each patient examined; a thorough training in physical diagnosis, and the examination of new patients by senior members of the class.
