SAVE YOUR COAL.**J. W. ELLIOTT'S**

—PATENT—

Saver Hall Stove.

The advantages gained over all other stoves are, it produces the greatest amount of heat from a given amount of fuel: this is accomplished by the flue pipe, which is bent down, around and underneath the base. Another object is to secure the greatest possible benefit of the fire, which consists in placing around the body of the stove a series of internally projecting pockets overlapping the fire pot, and so formed that the air of the room is admitted into the lower end of the pockets, and after passing through them, re-enters the room, having become intensely heated through contact with the inner sides of the said pockets, which are immediately over the hottest part of the fire, thereby producing far greater results from a GIVEN AMOUNT OF FUEL THAN ANY OTHER STOVE.

An Evaporator which is part of the Stove.

The cover is a water tank, and becomes an effective evaporator, which produces a greater or less amount of vapor in proportion to the intensity of heat.

There is a double heater, by means of which heat can be conveyed to any apartment above, and supplied with sufficient vapor from the tank. Also a combined hot air and steam bath is made if desired.

It is Simple and Easy to Control.

All hinged doors are abandoned, the mica lights can be removed, cleaned and replaced without burning one's fingers.

The base plate is of cast iron, in the place of zinc or other perishable materials, and is raised sufficient for the cold air on the floor to pass up through its raised and hollow cone-shape to the stove, and the circulation produced thereby equalizes the temperature of the room.

There are two grates similar to the base of a circular basket. They can be rotated together or separately.

The fire can always be relighted without removing the coal. No screening or sieving, and no waste whatever.
