### THE WONDERFUL HOPE JEWEL.

Diamonds, Sapphires, Opals, and Pearls—A Very Valuable Collection.

The collection of jewels and precious stones formed by the late Henry Philip Hope, the collector of which is to be sold at Christie's, was one of very remarkable interest, chiefly on account of the famous blue diamond which more than half a century back was known as the Hope diamond, having come into the possession of Mr. Henry Thomas Hope of Amsterdam, in London. This extremely rare gem, however, which was the rival of the Koh-i-noor in the great Exhibition of 1881, and which is the chief of about five of the finest blue diamonds known, it was included in the present sale.

A splendid star of pure fire shines out in the lovely sapphire known historically as "Le Saphir Merveilieux," upon which Madame de Genlis founded a charming story when it belonged to Philippe Egalite, Duc d'Orleans. In color this beautiful stone, which is five-eighths of an inch across and set round with small brilliant stones, is even richer and more brilliant than the fine diamond, and is set in a fine gold ring. Its weight is 132.10 carats, without a base, which was found by a poor beggar, after which it was found by one Mr. Ransel of Rome, and eventually came to a Paris jeweler who sold it for 170,000 francs.

Another interesting jewel is the King of Candy's eye, the largest known, being an inch and a half in diameter and hemispherical, mounted in the original Oriental setting of gold studded with rubies set on a cushion. Its color cannot be better described than by its resemblance to the gleaming green and tawny yellow of the coral eye of cats and tigers. The stone of the silver light, and this is the last of the series, and this is the last of the series, and this is the last of the series.

Of the opals there are some fine specimens, both of the Hungarian, which are the best, and of the Mexican, which are softer and more porous. A beautiful specimen formed like a chameleon, with the creature's back shined all over with opals of changing tints. This is an exceedingly fine example of the art of the jeweler of the seventeenth century, in gold and enamel work.

Another very interesting opal is the "Mexican sun opal," so called from having the head of the sun and carried upon it. This is an inch long and nearly the same in width, and the carving seems to be barbaric and not antique Roman, or we might fancy it was the opal of hispanic celebrity, which was carried by Marc Antony, and led him to battle Nones, the possession of it, who, however, escaped with the opal. This curious Mexican opal has its traditions as being historically known since the thirteenth century.
