

Afflicted for years with a Diseased Liver

Mr. L. R. Devitt, Berlin, Ont., better known, perhaps, as "Smallpox Ben," has used

MILBURN'S LAXA-LIVER PILLS

He has also used them for his patients when nursing them, and it is a well-known fact that small-pox sufferers must keep the bowels well regulated.

Read what he says:—"I have been afflicted for years with a diseased liver, and have tried all kinds of medicine, but of no avail until about four years ago I tried your Laxa-Liver Pills, and got instant relief. Since then I have nursed different patients afflicted with small-pox, and in each case I have used your valuable pills.

"My wishes are that all persons suffering with stomach or liver troubles will try Milburn's Laxa-Liver Pills. I will advertise them whenever and wherever I have an opportunity and I hope that if at any time I cannot get the pills, I will be fortunate enough to get the formula."

Milburn's Laxa-Liver Pills are 25 cents per vial or 5 vials for \$1.00, at all dealers or will be mailed direct by The T. Milburn Co., Limited, Toronto, Ont.

GLENGORE ABERDEEN ANGUS
Present offering: One bull 2 years old, and three choice bull calves, and anything in the female line. A choice lot and sold right. **GEO. DAVIS & SONS, ALTON, ONT. Station, C. P. R.**

"Johnny," said a father to his greedy offspring, "you are like a pig. Do you know what a pig is?"
"Yes, sir," answered Johnny, "a pig is a hog's little boy."

A Georgia editor was asked: "Do hogs pay?" He replied: "A good many do not. They take the paper for several years and then have the postmaster to mark it 'refused' or 'address unknown.'"

A certain farmer in Hastings Co., Ont., had been in the habit of growing a few peas each year, but, owing to the bugs, etc., destroying them, had, like a great many other farmers, given up the idea the past few years. However, he decided to again try a few bushels this year. When threshing time came, he called down from the straw mow to the man caring for the bushels to know what the yield had been. On being told five bushels, he replied, "Well, where in the world did that other bushel come from? Why, I only sowed four?"

GOSSIP.

BRIGHTER PROSPECTS FOR SHEEP

A silver lining to the cloud over the sheep trade can now be seen, and it will become brighter from now on. There are good reasons for this belief. The western range receipts will be quite small the balance of the season, and excessive runs of native stock will not be a feature of the trade. Besides all this, consumptive demand is broadening because of colder weather, and the advance in rates for pork and beef. A strong market should be the rule rather than the exception in view of the rather bullish prospects, but it should be remembered that a good thing may be quickly spoiled by congesting supplies or marketing half-fat stock too freely. The latter is most to be feared, as cold and stormy weather is due, and it is under these conditions that such offerings are usually sent to the shambles in greatest numbers.—Chicago Live-stock Report.

SCIENCE BALKED.

The most enigmatical case with which modern biology has to deal is the regeneration of the eye in the tadpoles of salamanders. If the lens be removed from the eye of a young tadpole, the animal proceeds to manufacture a new one to take its place and the eye becomes as perfect as before. That such a process should take place at all is remarkable enough, observes Prof. Edmund Beecher Wilson in his lecture on biology at Columbia University. But from a technical point of view, he adds, this is not the most remarkable feature of the case.

What fills the embryologist with astonishment is the fact that the new lens is not formed in the same way or from the same material as the old one. In the normal development of the tadpole from the egg, as in all other vertebrate animals, the lens is formed from the outer skin or ectoderm of the head. In the replacement of the lens after removal it arises from the cells of the iris which form the edge of the optic cup, and this originates in the embryo, not from the outer skin, but as an outgrowth from the brain.

As far as we can see, neither the animal itself nor any of its ancestors can have had experience of such a process. How then can such a power have been acquired, and how does it inhere in the structure of the organism? If the process of repair be due to some kind of intelligent action, as some naturalists have supposed, why should not the higher animals and man possess a similar capacity?

To these questions biology can at present give no reply.—Current Literature.

EDITORIAL ENTERPRISE.

Booth Tarkington says that in no State have the newspapers more journalistic enterprise than in his native Indiana. While stopping at a little Hoosier hotel in the course of a hunting trip, Mr. Tarkington lost one of his dogs.

"Have you a newspaper in town?" he asked of the landlord.

"Right across the way, there, back of the shoemaker's," the landlord told him. "The Daily News—best little paper of its size in the State."

The editor, the printer, and the printer's devil were all busy doing justice to Mr. Tarkington with an "in-our-midst" paragraph when the novelist arrived.

"I've just lost a dog," Tarkington explained, after he had introduced himself, "and I'd like to have you insert this ad. for me: 'Fifty dollars' reward for the return of a pointer dog answering to the name of Rex. Disappeared from the yard of the Mansion House Monday night.'"

"Why, we were just going to press, sir," the editor said, "but we'll be only too glad to hold the edition for your ad."

Mr. Tarkington returned to the hotel. After a few minutes he decided, however, that it might be well to add "No questions asked" to his advertisement, and returned to the Daily News office.

The place was deserted, save for the skinny little freckle-faced devil, who sat perched on a high stool, gazing wistfully out of the window.

"Where is everybody?" Tarkington asked.

"Gawn to hunt th' dawgs," replied the boy, without removing his gaze from the distant fields.
