BAKE MORE QUICKLY AND USE LESS FUEL

A new heating principle with numerous distinctly new features. In all old style Ranges heat cannot go into the Oven until the fire burns up well enough to allow the dampers to be closed.

In the High Oven Range the Oven is heated with the very first kindling because it is in the direct path of the flames so it becomes ready for baking very quickly and requires less fuel to finish baking. Heat in this range travels the natural way UP no forcing down of the heat and smoke.
