\$2,000,000

Fraser Companies Limited

6% Ten-Year First Mortgage Serial Gold Bonds

Dated April 1st, 1919. Maturing, \$200,000 annually, April 1st, 1920-1929.

Interest payable 1st April and October. Principal and semi-annual interest payable in gold coin at Montreal, Toronto, New York or London, Eng. Coupon Bonds with privilege of registration as to principal. Montreal Trust Company, Montreal, Trustee.

DENOMINATIONS: \$1,000 and \$500

CAPITALIZATION

Common Shares	Authorized \$10,000,000	Outstanding \$10,000,000
6% First Mortgage Serial Bonds	2,500,000	2,000,000

SECURITY FOR BONDS

Bonds will be secured by a specific First Mortgage and charge upon freehold and leasehold lands, water powers, timber leases, all plant and machinery now owned or hereafter acquired by the Company, and by a floating charge on all other assets.

Complete prospectus, copies of which will be forwarded on request, contains a letter from Mr. Archibald Fraser, President of the Company, from which we summarize as follows:

- Fraser Companies, Limited**, is one of the largest manufacturers in Canada of spruce lumber and cedar shingles. It also operates at Edmundston, N.B., a Bleached Sulphite Pulp Mill with an annual capacity of 35,000 tons. The business has been in operation since 1877.
- Timber Areas**, freehold and leasehold, in Eastern Quebec and New Brunswick aggregate 1,661 square miles and contain 1,760,000,000 ft. b.m. spruce and cedar, and 4,650,000 cords pulpwood. In addition, 900 square miles of privately owned lands are operated under favourable lease.
- Annual Output** is as follows:
Bleached Sulphite Pulp..... 35,000 tons per annum
Lumber Production..... 100,000,000 ft. b.m. per annum
Shingle Production..... 135,000,000 pieces per annum
- Property Values** securing Bonds \$10,000,000—five times \$2,000,000 Bonds outstanding.
- Net Current Assets**, after deducting all Current Liabilities, as at December 31st, 1918 (including this issue) totalled \$1,594,836.77—over 79% of Bonds issued.
- Net Earnings**, as certified by Geo. A. Touche & Company, for five years, 1914-1918, inclusive, after Depreciation and Bank Interest, were:

Year	1918	1917	1916	1915	1914
Net Earnings	\$740,374.37	\$706,355.11	\$432,003.14	\$393,321.04	\$410,267.71

Bond Interest \$120,000 (reduced annually by serial maturities)

Net Earnings given above make no allowance for profit on the Company's investment of approximately \$2,500,000 in its Edmundston pulp mill recently put in operation. Earnings from this source alone during the current year are expected to be several times Bond Interest requirements.

Amount	Maturity	Price and Interest	Amount	Maturity	Price and Interest
\$200,000	1920	100.00	\$200,000	1925	98.03
200,000	1921	100.00	200,000	1926	97.77
200,000	1922	98.92	200,000	1927	97.53
200,000	1923	98.61	200,000	1928	97.30
200,000	1924	98.31	200,000	1929	97.08

Over \$1,750,000 of this issue having been sold, we offer for sale the balance at the above prices—

To Yield 6.40%
(Except 1920-1921 Maturities, to yield 6%)

Payable as follows: 20% of the par value on application.
40% of the par value on May 1, 1919.
Balance, June 1, 1919.

The right is reserved to allot a portion only of the amount applied for. If only a portion of the amount applied for be allotted, the balance of the deposit will be applied towards payment of subsequent instalments. Payments may be anticipated in whole or in part at any time. Interest will be allowed on payments at the rate of 6% per annum. Accrued interest will be adjusted upon final payment.

Application may be made on the accompanying form.

PEAS AND OATS

Oftentimes the failure of the regular hay crop or the necessity for an increased amount of forage is the cause for much speculation in determining a providing for the deficit. As an emergency crop there is none more suitable than a mixture of peas and oats. In fact, it is a valued dual purpose crop with those who have had experience with it since it is equally suitable for soiling, hay silage and grain purposes. The classes of crop, namely peas and oats, making up the mixture are admirably adapted for growing together.

They both have the same seasonal and climatic requirements and mature in about the same number of days. Besides the oats support the pea vines which facilitates the harvesting and curing of the crop.

At the Central Experimental Farm and several of the branch Farms and Station this crop has been utilized extensively as a soiling, silage and hay crop as circumstances demanded. It is usually grown as a catch crop where the hay crop has failed or in a regular rotation of, first year oats crop, second year peas and oats seeded down to clover and, third year, clover hay. Exception may be taken to peas and oats as a nurse crop which is ordinarily justifiable where the crop is allowed to ripen for grain. On the other hand,

where the peas and oats are cut in the green state, thus being removed early in the season, the disadvantage as a nurse crop for clover is practically eliminated. In the experience of the Experimental Farms the stands of clover on areas having peas and oats as the nurse crop, are practically equal to other stands of clover grown with nurse crops of wheat, barley and oats.

The cultural treatment of the soil for a crop peas and oats under regular cropping conditions is similar to that for ordinary grain crops. Fall ploughing, discing thoroughly in the spring until a deep, mellow seed-bed is prepared, proves most satisfactory. Sown as a catch crop where new seedlings of grasses and clover fail, a satisfactory seed-bed may be prepared either shallow ploughing or by thorough discing depending on the compactness and nature of the soil. Older meadows or exhausted sod areas can only be prepared for crop by ploughing and discing. In sowing, ordinary seed-drill is used. The peas and oats should be mixed thoroughly before being placed in the seed-box of the drill and from time to time as sowing goes on the mixture should be stirred with the hand. Otherwise the peas will work down through the oats and be sown first leaving the last part of the seeding almost pure oats. The most suitable proportions of the

mixture are equal parts by weight, sown at the rate of at least 3 bushels per acre. Suitable varieties include Golden Vine and Prussian Blue pea and Banner and O. A. C. No. 72 Oats.

Cutting for soiling may take place before pods form on the pea vines and the oats began to head. Saved as hay, cutting began as soon as pods are formed and the oat kernels are in the milk stage of growth. This is also the most suitable stage at which to cut for silage. If the crop is not required for any of the foregoing purposes it may be allowed to ripen to be harvested for grain. Both grain and straw makes good feed.

The feeding value of pea and oat hay is high, standing very close to alfalfa and equal to red clover. As silage it is excellent, although it yields less and the cost of production is greater than corn ensilage.

This accommodating crop, so suited to varied conditions, is bound to become better known and more highly appreciated on a greater proportion of Canadian Farms

The West Indies wants our fish, our lumber, our flour, our manufactured products. There is a market there for many millions of dollars worth of Canadian goods. Canada wants the sugar produced in the West Indies, the cocoa and the fruits.
