

MALTINE.

MALTINE is a concentrated Extract of Malted Barley, Wheat and Oats, and presents all the nutritive and digestive principles to be found in these renowned cereals. Being especially rich in Diastase and other Albuminoids (DIGESTIVE AGENTS AND MUSCLE-PRODUCERS), also in the Phosphates (NERVE AND BRAIN FOOD AND BONE-PRODUCERS), it will be found to increase flesh and bodily weight, and build up the system more rapidly than any other known remedial agent, and will therefore be found invaluable in all cases of

General Debility, Chest and Lung Affections, Nervous Prostration, Impaired Digestion, and in all cases where the system requires building up.

FOOD FOR THE INVALID. By J. MILNER FOTHERGILL, M.D., Senior Assistant Physician to the Victoria Park Chest Hospital, London, Eng., &c.

"The action of the saliva upon the starch is to quickly convert it into sugar. Consequently, as sugar is soluble, this leaves the nitrogenized portion of the flour to be readily acted upon in the stomach. When the saliva is defective in an infant, or at least insufficient to produce the conversion of starch into sugar, it is now customary to give the infant Maltine. Maltine is a sweet molasses sort of thing, which can be added to the baby's food a brief period before it has to be taken, for the conversion is quick. The starch being thus largely converted into sugar, the digestive act in the stomach goes on without painful efforts. The treatment of dyspepsia in adults is carried out in precisely the same principles, and baby's food and Maltine are equally good for them."

PROFESSOR JOHN ATTFIELD, Ph.D., F.R.S., F.I.C., Professor of Practical Chemistry to the Pharmaceutical Society of Great Britain, in writing on Malt preparations, states as follows:—

"In comparison with the Alcoholic Malt Extracts, Maltine is about *ten times* as valuable as a *flesh former*, from *five to ten times* as valuable as a *heat producer*, and at least *five times* as valuable as a *Starch Digesting Agent*. It contains unimpaired, and in a highly concentrated form, the whole of the valuable material which it is possible to extract from either Malted Wheat, Malted Barley, or Malted Oats."

PROFESSOR R. OGDEN DOREMUS, M.D., LL.D., Professor of Chemistry and Toxicology, Bellevue Hospital Medical College, New York, writes as follows, viz.:

"Maltine is superior in *therapeutic and nutritive value* to any Extract of Malt made from Barley alone, or to any other preparation of one variety of grain. It is nutritive to every tissue of the body, from bone to brain."

MALTINE is prescribed by the most eminent members of the Medical Profession in Canada, the United States, Great Britain, India, China and Australia, and is largely used at the principal Hospitals in preference to any of the Extracts of Malt. It is prepared in several combinations, so as to more completely agree with the different indications met with in disease.

Send for our 28-page Pamphlet on Maltine and its combinations.
