Export Contact: Mr. Richard Piatti, Director

Federal Elevator Systems specializes in the manufacturing and installation of elevating devices for the disabled and passenger elevators for a wide variety of applications. The company has manufactured hundreds of standard hydraulic elevators and lifts and many custom design products that range from 10,000 pound freight elevators to 26 floor high speed passenger elevators. The main products are the Carelift and the Regal Lift. The Carelift is a vertical lift that is designed to transport disabled or elderly persons in buildings that are accessible to the general public. The Regal Lift is a vertical lift that fulfils the same task as the Carelift, but designed for home use.

Founded in 1988, its principals have extensive experience in the durable medical equipment industry, having taken participation in the development of the market for these types of elevating devices both in Canada and the United States, as well as having been involved in the development of national codes that cover the installation of these devices. The company is based in a modern building where it conducts all of its manufacturing, engineering and R & D activities under strict controls that guarantee the integrity of its elevators and lifts, and the quality of design is accurately extended to the final products.

Federal Elevator products are sold through a vast network of dealers and representatives that have been trained to satisfy the demanding requirements of virtually any customer. For those regions where no dealer or representative has been appointed, the company has performed installations directly with success, but it prefers to distribute its products through durable medical equipment dealers or elevator companies. The company supports its representatives with updating of its sales literature, varied advertising, regular training seminars and direct contacts. As well, the sales department is capable of communicating with customers and representatives in english, spanish and french.
