been over most of the southern mainlard. considers the lands extending north-west considers the fance extending north-west of Westroad River, embracing an area of sbout five million acres, and including most of the "lake country," at least as good as any in the province for atock and farming purposes. See, in their reports, what Messre, Selwyn, Macoun and G. M. Dawson have set forth about this country as to its agricultural value, &c. On the long valley of the Wastonqua, a tributary of the Skeens, my informant found gooseberries and strawberries as large as gar-den sorts, and in a few places the red sur-rant similar to the cultivated kind. The hanghs and brass of the Wastonqua, the delight of cattle drovers to Cassiar, wave in summer with Inxuriant grasses and vetches. The stream flows sluggishly, and could, it is said, at small outlay, be rendered navigable for river steamers. The lakes and atreams of the north country abound in excellent fish. Its climate is snited for the growth of turnips, being moister in summer than that

A so he as wells a survey of the the We call a T bared the appayer, some a by as well and the hed he viewingly The northern limit of fall wheat growing in the Dominion has yet to be skilfully tested from Norway House, if not further east, to Fort Stager, N. Lat. 55.9. 20, if not beyond. There, in 1866-67, a bullock wintered out, and was found in spring in fair condition.

It is very gratifying to observe that the value of our province as a whole is becoming better and better appreciated throughout the Dominion. Oordisity should prevail between east and west, and, above all, smongst ourselves. Victorians desire the real welfare of the southern mainlanders. As an evidence of what a careful observer and close reasoner, Principal Dawson, of Montreal, thinks of our province as a whole. I sak you to print as an appendix to these letters when issued from The Gotomar pressin pamphlet form, the accompanying extract from Dr. Dawson's address. (18th May, 1877) to the Natural History Society of Montreal.
