

Poetry.

THE FARMER'S DAUGHTER.

She may not in the merry dance,
With jewell'd maidens vie,
She may not smile on courtly swain
With soft, bewitching eye...

Then tell me not of jewel'd fair—
The brightest jewel yet
Is in the heart where virtue dwells,
And innocence is set!

New Process of Refining Sugar.

The statements made in some of the news
papers respecting the new process of manu-
facturing sugar, for which Mr. P. Abraham
has applied for, and will no doubt obtain a
patent, are generally incorrect.

The Philosophy of Sensation.

A striking case occurred in one of the Lon-
don hospitals some time ago. A man was
taken in who had received an injury in the
lower part of the brain, which deprived him
of all sensation below the head.

Expanding the Chest.

Those in easy circumstances, or those who
pursue sedentary employment within doors,
use their lungs but little, breathe but little air
in the chest, and thus, independently of position,
contract a wretchedly small chest, and lay
the foundation for the loss of health and beauty.

It should be observed that these advantages

of a copious supply of water pertain chiefly
to small or annual plants. The roots of
fruit trees being larger and deeper, are to be
supplied with moisture in a different way;
that is, by a deep, rich, mellow soil, kept
moist by cultivation, or by covering thickly
with litter.

THE INDIVIDUAL who broke the ice with his

maiden speech, was drowned by applause.

How to Convert Salt Water into Fresh.

The following simple process to procure
fresh water at sea, was published in the news-
papers many years ago. The experiment can
be easily made—and knowing how easy it is
to obtain fresh water, by digging in the sand,
near the sea shore, we see no reason why it
might not be successful, in which case it
might prove in certain cases of great advan-
tage.—A common hoghead is provided with
a false bottom, about three or four inches
above the lower head. This false bottom
is perforated with a number of holes, and
over them a filter of flannel. The barrel is
then nearly filled with the finest sand, beat
down very hard; a tube communicating with
the space between the two bottoms, is extend-
ed to a convenient height above the top of the
barrel. The sea water is poured into this
tube, and pressing every way according to its
altitude, it endeavors to force its way through
the sand to the top of the barrel, from whence,
by this mode of filtration, it is drawn off fresh
and fit for use. Any other filter will do as
well as flannel, which will stop the sand and
admit the water. The saline particles being
heavier, and perhaps differently formed, meet
with obstructions from the sand, and are left
behind.

Importation of Kerry Cows and Scotch Cattle.

Who of those among us who have the means,
will also have the enterprise and the courage
to import some Kerry cows from Ireland, and
some Galloways and Kyloes from the Highlands
of Scotland.

Our friend Howard, of the Boston Cultiva-
tor, has long advocated the utility of intro-
ducing these breeds, viz., Galloways and
Kyloes into New England, but no one as yet
seems disposed to risk the experiment. Where
any cattle have been imported they are specu-
mens of the barn-yard aristocracy, such as
Durhams, Herefords, Devons, Ayrshires and
Alderneys, while the more democratic and
humble, but to many locations far more use-
ful, the humble Kerry cow and other named,
are wholly neglected.

Why do not some of the rich agricultural
societies turn their attention to this subject,
and spend some of their "surplus revenue" in
this way. Could the Massachusetts Agricul-
tural Society do better with some of their
money than to expend it in importing some
of the above-named cattle? They had heret-
ofore done the public great service by their
importations. Why not continue in well do-
ing by sending an agent to the Scotch high-
lands and to the Emerald Isle, to select and
bring over specimens of their cattle, and per-
haps a few of the small and delicate Welch
sheep, that may be kept on the seaboard and
yield good lambs at any age and all times of
the year. Though an "outsider," and belong-
ing to another parish, we respectfully submit
the proposition to their consideration.

Indian Corn for Fodder.

Perhaps there is no vegetable or plant that
we can cultivate, which will yield so much
fodder to the acre as Indian corn. Now is a
good time to put it in, although it will yield
quite a crop if not planted until the last of this
month. There are two ways of cultivat-
ing it for fodder, viz.: Broadcast, as you
would oats or wheat, and in drills or rows.
If the soil is free from weeds, it will do to sow
it broadcast, but we much prefer to sow it
in drills. After ploughing and harrowing the
ground, furrow it into drills, from two to three
feet apart, so as to enable you to run the cul-
tivator between them. Then, if you have ma-
nure, sprinkle it in the drills, and then scatter
in the southern part of the field, and then scatter
some call it. This will come up and grow
luxuriantly, and may be weeded out once or
twice by means of the cultivator.

Irrigation of Gardens.

From repeated experiments we are induced
to draw the conclusion, that next to manure
the great prime mover is successful culture,
there is nothing more important to vegetable
growth in many cases than irrigation. Prac-
tical gardeners, in countries far more moist
than our own, regard it as indispensable, and
a large share of their success depends on co-
pious watering.

Some interesting instances, which have re-
cently occurred, may be worth stating.

Two rows of raspberries stand on ground in every
respect alike, except that one receives the
drippings from a wood-house, and the other
does not. The watered row is fully four
times as large in growth as the other. Again
the berries on the bushes of a Pastoph and
Francina raspberries were, at least, twice as
large when the soil was kept moistened, as
afterwards when allowed to become dry; a
repetition of the watering again doubled their
size. Again—a near neighbour, who culti-
vates strawberries for market, and who uses
a water-cart for irrigating the rows, raised at
the rate of one hundred and twenty bushels to
the acre, on common good soil by this means;
and he noticed that where the cart was left
standing over night, so that the water gradu-
ally dripped from it, for some hours, upon a
portion of the plants, the fruit had grown to
double the size of the rest in twenty-four
hours.

It should be observed that these advantages

of a copious supply of water pertain chiefly
to small or annual plants. The roots of
fruit trees being larger and deeper, are to be
supplied with moisture in a different way;
that is, by a deep, rich, mellow soil, kept
moist by cultivation, or by covering thickly
with litter. Water applied to the surface
rarely descends so low as the roots, and only
hardens the soil to a crust.

Irrigation of gardens should be accompa-

nied with some soluble material suited to the
requirements of the plants. Rank feeders,
like raspberries, will be benefited by a solu-
tion of night-soil, guano, &c.

Effects of Irrigation.

Speaking of orchards, a writer in the Ger-
man Telegraph says, "A friend of mine whose
orchard was situated on the side of a
gentle slope, with an extensive travelled
thoroughfare upon the upper side, finding that
his trees were failing in health and produc-
tiveness, opened a number of small drains
from the latter in such a manner as to secure
the benefits of irrigation to each individual
tree. The effect was wonderful—every tree
took an almost instantaneous start, threw out
a mass of young and vigorous shoots, and pro-
duced more shoots in a single season than for
years before."

Compost for Corn.

EDITOR OHIO FARMER:—As you was so
good as to notice in your valuable paper my
mode of making winter butter, I now send you
my manner of making domestic guano, for
my corn, which if you think worth publishing
you are at liberty to do so.

I take my leached ashes and to four bush-
els I put one bushel of hen manure from my
hen house, and mix them well with a shovel,
and then cover the whole with plaster. In a
few days the whole mass will be completely
dry and if I do not wish to use the compost
immediately I let it remain on my stable floor
until my corn is coming up, and then put a
single handful on each hill. But before using
I mix it thoroughly, which is not so agreeable
a job, as the ammonia is apt to make the tears
run while mixing. I have tried almost every
kind of top dressing for corn, but have found
nothing that will compare with my domestic
guano. The best time to put the above on the
corn is, just before a rain. I am sure it will
add one third to the crop.

Respectfully yours,
FRED'K. WOODBRIDGE.

DOMESTIC RECEIPTS.

Egg DUMPLINS.—Make a batter of a pint
of milk, two well beaten eggs, a salt spoonful
of salt, and flour enough to make a batter as
thick as for pound cake; have a clean sauce-
pan of boiling water, let the water boil fast,
drop in the batter, let it remain in the water
for five minutes, then take them up, and
skimmer on a dish, put a bit of butter
and pepper over, and serve with boiled or cold
meat; for a little dessert, put butter and grated
nutmeg, with syrup or sugar over.

To BROIL HAM.—Cut some slices of ham,
quarter of an inch thick, lay them in an acidu-
lar pan for half an hour, or give them an acidu-
lar pan over the fire a few minutes, then take them
up, and lay them in a gridiron, over bright
coals; when the outside is browned, turn the
other side, then take the slices on a hot dish, but-
ter them freely, sprinkle pepper over, and
serve.

Or, after scalding them, wipe them dry,
dip each slice in beaten eggs, then into rolled
crackers, and fry or broil.

To DESTROY ROACHES.—Take an earthen
bowl or other high earthen vessel, and fill
it full of molasses and water, made very
sweet; place it on the floor near the haunts
of the insects, and place one or more strips
of board or shingle, with one end resting on
the vessel and the other on the floor. The
insects, attracted by the odor of the mixture,
will ascend these strips and plunge into the
mixture, where they will speedily drown. Of
course, precaution should be first taken to
exclude everything else which will attract
them, from their reach.

To CURE WARTS OR CORNS.—Take half
an ounce of sulphur, half an ounce of ninety
per cent. spirits, put into an ounce vial, shake
them well together, then freely apply to the
warts, or wart, for a few days once or
twice a day, and in a few weeks, or months,
all the warts will disappear. And so
with corns in like manner. Warts can also
be cured by washing them with a solution of
soda, and allowing it to dry on them.

To DRILL GLASS.—A correspondent wishes
to inform the readers of the Telegraph,
that glass can be easily and neatly drilled
with a small drill, operated by a bow, and
kept moist by spirits of turpentine.—German-
town Telegraph.

No. 4, Water-street.

W. TISDALE & SON

Are receiving ex "Bellevue," from Liverpool:—
110 RUGS Iron WIRE, from No. 4 to 19
4 cases Tea Kettles, Sauce Pans, &c.;
2 cases Sad Irons; 1 case Wire Grating;
2 cases round point SHOVELS,
1 case SICKER'S hand, tenon, mill and other Files,

A lot of Havana CIGARS, very superior;
20 cases London Congo TEAS;
20 barrels Superfine FLOUR;
10 small cases E. I. PALE ALE; for sale by
May 3, 1853. JOHN V. THURGAAR,
North Market Wharf.

The Road to Health.

Holloway's PILLS.

CURE OF A DISORDERED LIVER AND BAD
DIGESTION.
Copy of a Letter from Mr. R. W. Kirkus, Chemist, 7
Prescot Street, Liverpool, dated 6th June, 1851.

To Professor HOLLOWAY.

SIR—Your Pills and Treatment have stood the highest
on our list of Proprietary Medicines for some years.
A customer, to whom I can refer for any enquiries, desires
me to know the particulars of her case. She had been
troubled for years with a disordered liver, and bad
digestion. On the last occasion, however, the violence of
the attack was alarming, and the inflammation so se-
verely, that doubts were entertained of her not being able
to bear up under it; fortunately she was induced to try
your Pills, and after having taken the first dose, and each
succeeding dose, she had great relief. She continued to
take them, and although she used only three boxes, she is
now in the enjoyment of perfect health. I could not repeat
you many more cases, but the above, from the severity of
the attack, and the speedy cure, I think, speaks much in
favor of your astonishing Pills. (Signed) R. W. KIRKUS,
Chemist, 7, Prescot Street, Liverpool.

AN EXTRAORDINARY CURE OF RHEUMATIC
FEVER, IN VAN DIEMEN'S LAND.

Copy of a Letter inserted in the Hobart-Town Courier, of
the 1st March, 1851, by Major J. Walsh.
Margaret McConigan, nineteen years of age, residing in
New Town, had been suffering from a violent rheumatic
fever for upwards of two months, which had entirely de-
stroyed the use of her limbs, during the inflammation in so
severely, that doubts were entertained of her not being able
to bear up under it; fortunately she was induced to try
your Pills, and after having taken the first dose, and each
succeeding dose, she had great relief. She continued to
take them, and although she used only three boxes, she is
now in the enjoyment of perfect health. I could not repeat
you many more cases, but the above, from the severity of
the attack, and the speedy cure, I think, speaks much in
favor of your astonishing Pills. (Signed) R. W. KIRKUS,
Chemist, 7, Prescot Street, Liverpool.

CURE OF A PAIN AND TIGHTNESS IN THE
CHEST AND STOMACH OF A PERSON 64
YEARS OF AGE.

From Messrs. Thew & Son, Proprietors of the Lym-
Advertiser, who can vouch for the following statement.—
August 2nd, 1851.
To Professor HOLLOWAY,
SIR—I desire to bear testimony to the good effects
of Holloway's Pills. For some years I suffered severely from
a pain and tightness in the stomach which was also accom-
panied by a shortness of breath, that prevented me from
walking about. I am 64 years of age, and notwithstanding
my advanced state of life, these Pills have so relieved me,
that I am desirous that others should be made acquainted
with their virtues. I am now restored, and feel much more
comparatively active, and can take exercise without incon-
venience or pain, which I could not do before.
(Signed) HENRY COE,
North Street, Lynn, Norfolk.

AN EXTRAORDINARY CURE OF THE GRAVEL,
AND A MOST DANGEROUS FEVER COMPLAINT.

Copy of a Letter addressed to J. K. HOLLOWAY, Esq., by
J. H. Thew, Esq., of New South Wales, dated Feb. 25th, 1851.
SIR—A Mr. Thomas Clark, a Settler at Lake George,
was for a considerable time seriously afflicted with the
stone of the Liver, together with the Gravel. His medical
attendants, after trying all their skill, candidly told him
that his case was hopeless, and they finally abandoned
him. In this situation, and when expecting every day would
terminate his existence, a friend recommended him to try
Holloway's Pills, and as a further hope he purchased a
box. He took them with considerable relief, he therefore persevered in
taking them according to the directions, and is now restor-
ed to health. He will be most pleased to see your Pills,
and this statement of events make an affidavit to the same effect,
should it be required.
(Signed) WILLIAM JONES, Proprietor of the
Goulburn Herald, New South Wales.

WONDERFUL EFFICACY OF HOLLOWAY'S
PILLS IN CASES OF DROPSY.

Persons suffering from Dropsy, either in the form of
the Gravel, or in any other form, should immediately have recourse to
these Pills, as hundreds of persons are annually cured, by
their use, of this direful complaint in its different stages,
when all other means had failed.

These celebrated Pills are wonderfully effica-
cious in the following complaints.

Ague, Asthma, Bilious Complaints, Blotches
on the Skin, Bowel Complaints, Colic,
Constipation of the Bowels, Consumption,
Debility, Dropsy, Dysentery, Erysipelas,
