

THE CANADIAN OIL COMPANY,

REFINERS OF **OIL.** SARNIA, ONT.

We are the **only** refiners who make as fine "WHITE WATER" Coal Oils from the Native Canadian Crude as can be made from the best American Crude, and, by our **New Process**, we also obtain so much larger a percentage of superior "Water White" Coal Oils, from Canadian Crude, than has ever been obtained before, that we are selling the best and finest quality Coal Oils, at **nearly half the price** (for car load lots), at which it has been selling, thus enabling dealers to replace the bad-smelling and smokey oils, hitherto sold as "Canadian Oils," by the **FINEST and BEST BURNING OILS IN THE WORLD**, and at a **very moderate cost to the consumer**.

Our "Water White" Oils are equal in every respect to the very best American Oils—fine illuminants; brilliant soft light; free from odor in burning, or clouds on chimneys; and entirely free from sulphur. They are also more economical, as they last longer in burning.

We are also making a

New Product for Wool Manufacture,

OLIVINE.

A great need for Wool Manufacturers, especially those who make fine goods, is an Oil which will meet all the requirements of their work; and in every stage of it will accomplish that work perfectly; be absolutely harmless to the most delicate fibre; reliable for working freely in any temperature, and which will wash out cleanly and completely.

No "oxy-hydro-carbon" oil, such as Olive and Lard Oils, answers these requirements perfectly; and the "hydro-carbon" oils (mineral oils) cannot be washed out while the sticky "compounds" and adulterations sold under the name of "Wool Oils," with which the market is flooded, have always been a source of loss, trouble and annoyance to Woolen Manufacturers, in many cases rendering their goods unsaleable, and most of them **dear at any price**.

To meet this want, and provide an Oil with all the desirable qualities first mentioned, we now introduce **A NEW PRODUCT**. A completely new invention, an oxy-hydro-carbon, a straight Oil, combining all the valuable properties of Olive and Lard Oils, together with the detergent cleaning property of the hydro-carbons.

THIS OIL, **"OLIVINE,"** will take an important place in woollen manufacture, as it will not only do **ALL** that Olive and Lard Oils can do, but will go far beyond them in usefulness and value, to the manufacturer, saving many times its cost.

In every part of the process of Wool Manufacture it makes a large saving. Send for circulars and letters of recommendation, to

THE CANADIAN OIL COMPANY, SARNIA, ONT.
