mands upon women, preparing the labors of the home in a tenth of the time and with a tenth of the effort. Fifty years ago effort was required to the "top-notch" the day, and almost night as well, to spin and weave and to make the clothing. We have more clothing and better clothing now and at one one-hundreth part of the cost than our forebears a century ago. Machines have brought rest to the body and have clothed with better and cheaper raiment

It is well to recall these things in order to constantly appreciate the radical change in transformation that has taken place in agriculture and in the home: and due to the thought that man has put into steel and iron and wind and sun and animal and plant and soil to do his work, giving him more time to think of more ways to still further conquer the non-human things, and to adjust them that they may be of greatest use to human beings.

Human ingenuity has given the farm a rich share from the storehouse of progress; every sort of tool and implement to increase the efficiency of man in tilling the soil; in raising the crop; in managing the farm animal; every sort of device to substitute team or tool for human hand, to make the cost less, the effort more true and certain.

It is now out of the question for us to use spades and hoes for till ing our soils. That stage was left long ago. It is too costly, the work is too poorly done when finished, and the returns are not commensurate with the effort expended. And yet, in efficiency, a poor plow, for instance, compares with the best plows hardly more favorably than the spade com-pares with the poor plow. If improved plows are to be had, you should show your appreciation by using them, allowing the scratchy, make-shift ones to go to the museum, replacing them by the most efficient that human ingenuity can fashion.

"More Power, Less Hard Work."

What will hold the boys on the farm and multiply the wealth of our farmers? More power and less hard work.

This is the key to agricultural reform: More power and better machinery on the farm, and more accomplished in a day, heavier horses or mules and more of them. Away with the half-a-mule farmer and convert the one-mule farmer into a four-mule farmer.

During the past twenty-five years unexampled progress has been made in the improvement and manufacture of farm machinery, all of which has been given immediate trial by the progressive farmers in the most progressive sections. Plows have been improved until to-day they are perfect in form and use. Harrows and cultivators, general and special, of numerous kinds and descriptions, now perform all the labor at one time done by hand. Seed drills for grain, grass and vegetables are truer in their dis-

YOU WANT A GAS TRACTOR?

The 1911 Model "FLOUR CITY" is both a Kerosene Oil Pull or Gasoline burner. The Gold Medal Winner. Made in sizes 20 h.p., 30 h.p. and 40 h.p. The best tractor made. Get our new Catalogue and Booklet of Testimonials.

F COURSE it's important that the cow do her part. But after that, it's up to your cream sepa-rator. If it doesn't get highest quality cream rator. if it doesn't skim to a trace—you are robbing your-self of the profit that your cows have produced.

1 H C Cream Harvesters get full value out of the milk, not for a few months only, but through years of constant service. They have proved their durability, close skimming, easy cleaning, and easy running advantage

I H C Cream Harvesters **Dairymaid and Bluebell**

Darrymaid and Bluebell are the only separators with dust-proof and mik-proof genrs, which are easily accessible. The frame is entirely protected from wear by phosphor bronze bushings. These separators have large shafts, bushings, and bearings; the flexible top-bearing is the strongest and most effective found in any separator. The patented dirt-arrester removes the finest particles of dirt from the milk before the milk is separated. I H C Cream Har-vesters are made in two styles—Dairymaid, chain drive; and Bluebell, gear drive—each in four sizes. The I H C local agent will be glad to point out the above features and many others, or, write to nearest branch house for catalogues and other information.
