

# Where the Codfish Come From

The climate of Newfoundland is more temperate than that of the neighboring Maritime Provinces; the thermometer rarely sinks below zero in winter, while the summer range rarely exceeds 80 deg. F.

Newfoundland Crown lands for farming purposes may be had for thirty cents an acre. The Island's agricultural development is going ahead by leaps and bounds.

WHETHER YOU WISH TO FISH FOR SPORT OR FOR PROFIT  
 ::: COME TO NEWFOUNDLAND :::

**H**ER fishing resources for either the commercial fisherman or the sportsman are the greatest in the world. They now produce well over fifteen million dollars of wealth per annum, and they are only beginning to be developed.

Newfoundland is the home of the cod fish and this forms the largest item in her fish production. But the island also produces large quantities of herring, salmon, lobster and many of the lesser fishes.

Heretofore these have come on the markets of the world in the dry-salted and pickled condition. But the frozen fish industry is rapidly developing. The latest reports from the British markets affirm that "the recent arrival of Newfoundland frozen fish was superior to the fresh fish often received from the Iceland grounds."

Newfoundland's forest wealth is large. The mineral resources are only partially known, although the iron mines on Bell Island have an output of 1,500,000 tons, and the industrial possibilities are attractive from every point of view.

The Government of Newfoundland gives generous aid to agricultural development. The value of agricultural products now approximates over \$1,000,000. Sheep raising is being encouraged and the progress in that direction is remarkable.
