

## Winter Draws On!

New shipment

## Stanfield Underwear

for

## Men and Boys.

GET YOUR'S NOW.

In our opening advertisement for "Stanfield's Underwear" this season we advised our patrons to buy early as we were afraid we might be unable to make deliveries later. We have been awaiting this shipment some time. Stanfield's advise they still have seven to eight hundred orders unfilled, and cannot guarantee immediate deliveries for any new orders at the moment.

## Prices Are Low Now—HENCE THE RUSH.

You can see the biggest assortment of Stanfield's Underwear at this store to be seen in St. John's.

## Henry Blair.

### Hurt Rays That Hurt.

X-rays is being brought to the aid of mankind so much on the one hand, it is an unfortunate fact that a week passes without a victim being claimed from those who work the apparatus. It is, then, that the X-rays can be beneficial in some ways and yet harmful in others?

As a matter of fact, a patient may receive nothing from a brief exposure to the rays. But radiologists are using a number of patients, a sort of "test" exposure to the rays, to see the condition of the body and the condition of the blood. It is generally been considered that the operator was quite safe when he "direct examinations" by the "fluorescent screen." A "direct examination" is where the radiologist uses the condition of a patient's skin and develops a plate. When such examinations are made, the patient is protected by a piece of lead supposed to be impervious to the ray's power.

It has been discovered, however, that the rays will penetrate nearly three-quarters of an inch of lead.

### MUTT AND JEFF

### Nero's Golden House.

The wicked Roman Emperor Nero, notable for his extravagance, his cruel treatment of the early Christians, and, among other things, the murder of his mother, built the costliest palace the world has ever known. It was called the "Domus Aurea," or Golden House.

Remains of one end of this colossal dwelling have just been unearthed. The building stretched from the Palatine across low ground to the Esquiline, thus linking and crowning two of Rome's seven hills. Its cost was fabulous. No one has ever been able to estimate that cost exactly. The lowest estimate is what to-day would be \$2,000,000,000 in gold!

No matter what accusations have been brought against Nero, no one has ever denied his astonishing imagination. On the Golden House he let his imagination run riot. It is recorded that it contained one hundred thousand rooms of all kinds. Scores of these had their walls overlaid with sheet-gold, studded with precious stones, and hung with masterpieces of art.

Fountains That Sprayed Perfumes. To defray its enormous cost, not only were Italy and the Roman provinces ransacked and taxed to the utmost, but the Roman possessions in Greece and Asia were despoiled of their wealth.

It was not only the Golden House itself, linking the two hills, that made it one of the wonders of the ancient world. The magnificent gardens must have shared its glory.

They sprang into being a few months after the conflagration which Nero is credited with having started, and which, according to the popular legend, he watched while fiddling. The idea of the Golden House seems to have been born in his mind through the great fire, whether he played the violin during its progress or not.

It was not long after that the foundations of the palace were laid, and thousands of slaves and workmen began to transform the burned area into the earthly paradise of woods and lakes and gardens that it became. Whole groves of trees were carefully and scientifically uprooted and replanted.

The mechanical arrangements in the vast dining-room of the Golden House were marvellous. There were bellows so arranged that a rain of flowers could fall from them upon the feasters. Here, too, were fountains which sprayed exquisite perfumes instead of water. There were rooms in which every article of furniture was made of solid gold, and where jewelled rooms and ivory rooms and the Golden House, erected by Nero, that of the famous Lucullus, who had as many dining-rooms in his home as others had bedrooms. Each dining-room was designed for a particular kind of feast, and each had its own particular name. If Lucullus said to his head steward, "Tomorrow we will dine in the Apollo," the servant knew that dinner must not cost less than \$4,000. It was Lucullus who, when his servant said, "We may have a simple meal, for there is no company to-night," uttered the mot, "You forget that Lucullus dines with Lucullus."

It was in the Golden House that Nero threw his mother, Agrippina, downstairs in one of his attempts to kill her.

### Negroid Chick.

New York.—A chicken, black-skinned from drumsticks to neck, has been developed at the Carnegie Institution experimental evolution station at Cold Spring Harbor, L.I. The bird popped into the world while scientists were playing put and take with chromosomes, germ plasm whose change in number and shape is held responsible by biologists for racial coloring. The "black" chick is not easily distinguishable from an ordinary white-skinned sister, for it is fully clothed in regulation feathers. By lifting these feathers, however, the skin is revealed jet black, warranted not to run.

### LONELY OLD FELLOW.

The roses are bedded for winter, the tulips are planted for spring. The robins and martins have left us; there are only the sparrows to sing. The garden seems so lonely and silent, awaiting its blankets of snow. And I feel like a lonely old fellow with nowhere to turn or go.

All summer I've hovered about them, all summer they've nodded at me. I've wandered and waited among them the first pink of blossom to see. I've known them and loved and caressed them, and now all their splendor has fled. And the harsh winds of winter all tell me the friends of my garden are dead.

I'm a lonely old fellow, that's certain. All winter with nothing to do but sit by the window recalling the days when my skies were all blue. But my heart is not given to sorrow and never my lips shall complain. For winter shall pass and the sunshine shall give me my roses again.

And so for the friends that have vanished, the friends that they tell me are dead, Who have traveled the road to God's Acres and sleep where the willows are spread, They have left me a lonely old fellow to sit here and dream by the pane. But I know, like the friends of my garden, we shall all meet together again.

### Finding New Pastures for Fish.

Scientists of the sea have visions of a time when we shall dispose fish in the sea much as a farmer disposes his flocks and herds on land.

We must first take a valuation of the sea, and that is the fascinating task which has been begun by the marine biologists of the Ministry of Agriculture and Fisheries in their laboratories at Lowestoft.

It has been established that the transplantation of plaice from the Danish and Dutch coasts, where the small fish are overcrowded, to the Dogger Bank results in a great acceleration of growth. Three of the latest instances of fish caught and marked, taken to the Dogger Bank, liberated, and recaptured show respectively a 90 per cent. increase of

### TOO ILL TO GO TO SCHOOL.

Mother Tells how Daughter was Made Well by Lydia E. Pinkham's Vegetable Compound.

Cobourg, Ont.—"Lydia E. Pinkham's Vegetable Compound was recommended to me for my daughter. She had trouble every month which left her in a weak and nervous condition with weak back and pain in her right side. She had these troubles for three years and frequently was unable to attend school. She has become regular and feels much better since she began taking the Vegetable Compound and attends school regularly. She is gaining steadily and I have no hesitancy in recommending Lydia E. Pinkham's Vegetable Compound and Lydia E. Pinkham's Blood Medicine."—Mrs. JOHN TOWN, Ball St., Cobourg, Ont.

Standing all day, or sitting in cramped positions, young girls contract deranged conditions, and develop headaches, backache, irregularities, nervousness and beating-down, pinkish, ill, every mother who has a daughter suffering from such symptoms should give Lydia E. Pinkham's Vegetable Compound a fair trial.

### Are You Right-Eyed?

Our eyes are seldom absolutely identical in every respect. Size, shape and colour all vary slightly, and one eye is generally stronger than the other. If you look through a telescope, which eye do you use? Instinctively you put the glass to the same eye as colour all vary slightly, and one eye is generally stronger than the other.

Looking for Fish Food.

The valuation of the sea consists in determining the quantity of fish food on the sea bottom.

A grab with interlocking teeth is used to take samples of the bottom. An area of two square feet of the seabed, to a depth of from three to six inches, with all the animals it contains, is lifted at each operation. It is washed through sieves, and minute details are kept of the numbers and kinds of the animal life it contains.

In one area one hundred samples have already been taken and tabulated.

The fish food found consists chiefly of various worms, small shell-fish, and hermit crabs.

By taking many samples of the stomach contents of fish it is known what fish eat, and by valuing the seabed it is decided where to put them to get that food in greatest quantity.
