# FARM AND GARDEN.

# AGRICULTURE.

The inability of alfalfa to resist drouth at the first stages of its growth is a great drawback to the cultivation of this valuable grass. It needs plenty of water to give it a start, but, after that, its roots will penetrate the ground 20 or 30 teet in search of water, and these roots will supply all the needs of the crops. The effect of long manure depends both upon the season and the applica-tion. It ploughed under, in a dry sea-son, the crop may be damaged, but if the same manure is spread upon the top after the crop has been planted, to serve as a mulch, there will be a better crop and a better re-sistence to the drouth. There is no longer question as to renewing seed. Gram will show a gradually weaker vitality, and its lie must be renewed. Renewals from the same parallels are not usually suf-cient, but should come from a location having different elimatic conditions; needs plenty of water to give it a

having different climatic conditions; usually from the north. The same side should not be used on the wheat nor oat held for more than three succes-

Le winter dairying and market gardening be combined, the two depart-ments will keep the hands busy and the year, and the labor be most conomicaly handled. Upon rich garden sputs heavy second crops of turnips and cab-bage can be grown to heap out the winter seeding, while rye in the va-cant places will give an early bite of machine

cant places will give an early bite of pasture. Near the top of the roots of the sugar beet little buds appear, which are miniature plants, and will produce a periect beet as surely as will the seeds. The only object in planting and cultivating these is that when a beet of any especial virtue as a sugar producer is found, the same may be perpetuated and improved. Experi-ments are making. The subsoil is the stratum of earth lying immediately beneath the

The subsoil is the stratum of earth lying immediately beneath the surface son, and subsoil ploughing is starring the soil to loosen it to an additional depth without bringing it to the surface. Usually this has re-qu'red a second plough to follow the first, but our manufacturers will come to the rescue, now that this procedure is no longer an experiment, but essential to good crops in many parts of the country. The closer the competition the bet-ter should be the system of farming

The closer the competition the bet-ter should be the system of farming followed. Present small prolits urge better management; and only with good management is it possible to procure even a rair per cent. of prolit, either with the crops or with stock. Because things are cheap we cannot a ford to be careless, and that farm pays best where the details are looked after most closely. That man who under the present condition of things can make farm-ing a success could be successful in almost any line of business. That theory has been long expoded that almost anybody can farm. It is ab-sontely necessary that the thrifty farmer should be a good business man, for failure in nearly every case comes from lack of good business management.

management.

#### HORSES.

Horse breeders need not be alarm-ed by the incoming of electric carri-ages. They are not yet a success,

ed by the incoming of electric carri-ages. They are not yet a success, and are a very expensive luxury. The running of them will cost much; nor can they be successfully used upon roads which are hilly, muddy, frozen or rough. Betting and gambling were barred at the pacing and trotting races in Washington Park, in Chicago, this fall, and it is certainly encouraging to note that these affairs were a de-cided success, notwithstanding the rorakers. Horses went upon their merits, without any bets to control their speed. The attendance was large, and not of the usual rowdy class. class. Horses may not reach the boom prices of former times, but they will soon certainly bring better prices than they have in the recent past. The low prices which have prevaied have sent many out of the business of raising them, and, as every one must see, a scarcity must follow. To meet this scarcity breeders should be at work. at work. Train the motions of the young horse. With him the walk is the foundation of all other gaits, and without theginning at its foundation at work. foundation of all other gaits, and without the inning at its foundation all future developments will be un-satisfactory. A slow walker in the wagon or the plough is a worse pos-session than an indolent farm hand. It is not likely that the time will ever come when a monarch will offer his kingdom for a bicycle, as did King Richard once to give his for a horse. It costs more to keep a bicycle than to feed a horse; the owner of the latter has that which will most pro-mote good health; the one is useful about two years, the other ten; there is no pleasure in carcessing a hicycle, while an intelligent horse appreciates every kindness. The results from numerous sales held in different parts of the country show that purchasers of fine horses are not paying much for mere pedi-gree. Descendants of noted animals sell for very low prices. Liberal pay-ers will not give the prices for horses which are merely promising, but de-mand such as have demonstrated their ability by actual performances. The o'd horse which has rendered which are merely promising, but de-mand such as have demonstrated their. The o'd horse which has rendered for and faithful service should not be so d to be traded about by jockeys, nor to be kept hall starved and over-vorded by some one who cannot al-ford a good horse nor deceatly feed a poor one. If you can not afford to keep him longer, have him killed in an entry of the set grambling by the "week." The livery man is af-fected by the hard times, and curses the bicycle and electricity; the to have healers say the riders upon them have less chance to smoke; the saloon keep rays men drink less. Even the beivele can would pick a crow with the wheel, believing it cuts down its dividends; but the rai'wy dif rot neither will the electric car nor the beivele stop the increase in the num-ber of horses for the road, the eity or the farm. The good creature is yet the pride of all nations.

SHEEP. Unless making a 'specialty of early lambs for the market, there is no object in having them come before April. By that time the weather is warmer, the grass has started and the cond.tions of growth are more favor-able in every way; and, as with all young stock, it is quite an item to procure a strong, vigorous growth from the start. Keep only the ewes; sell off all the A Frince Fdward Island Lady Speak

SHEEP.

from the start. Keep only the ewes; sell off all the wethers as soon as in a marketable condition. With the average farmer, who is keeping only a small number of sheep, the increase is largely the source of profit. Market, too, the sorub ewes. Do not keep too many, but keep well. Not for a long time have sheep been culled as closely as they now are. From this a benefit will arise in two ways—there is a cecided improvement Had no Appetite, was Pale and Easily Ex-To the Editor of L'Impartial :

Dear Sir,-I see by your paper the names or many who have been benefit-ed by the use of Dr. Williams' Pink Pulls. I feel that I ought to let my case be known, as I am sure that many women might be benefited as I ways-there is a cecided improvement in quality, and the smaller number will enhance the chance for a profit. will enhance the chance for a profit. Even now real good sheep pay, and the prospects are bright for a better profit another season. There is no other farm stock so pro-fitable as sheep for the amount of money and care involved, excepting, perhans, poultry, and none so ac-

perhaps, poultry, and none so ac-ceptable for domestic consumption. Were it not for the multitude of dogs which roam abroad in all places, sheep would be kept everywhere in small flocks, as they were a genera-

sheep would be kept everywhere in small flocks, as they were a genera-tion ago. A fowl provides an excellent meal for a family, but only one, while a lamb would supply them a week, and be a decided change from the staple provision of stilemeat or ham for the farmer's table. This view of the sheep question is not to be despised, and should be of significant interest to the provident housewite. On low, wet land there is little use attempting sheep, as disease will al-most sur ly apper and make the ven-ture unprofitable. On large ranges of cheap lands, whether of the prairies of the west or the hills of the east and south, there is no other stock which will so fully utilize the acres, or make so good a return. The farmer who has neglected his lambs will want to sell them at the approach of winter. Extra food would have fitted them before that time, and they would have brought a better price, as the market is not then overstocked by those who must sell. Keep up the infusion of young blood, for this will steadily enhance the value of the flock. Sheep growers will find it a good rule to sell at least ten per cent. of the oldest sheep every year, and retain the same pro-portion of the ewe lambs; and be careful lest there be too much in-breeding. It is not wise to dispose of the flock just because grain is high in price. At

breeding. It is not wise to dispose of the flock just because grain is high in price. At such times few are feeding, and fat sheep will bring enough extra price to a good profit over the increased cost of grain; but there must be careful culling and generous feeding, with a lit due account with all due econom

#### HORTICULTURE.

If well established trees have not grown well it may be a hint that a top dressing would be beneficial to them, and just now is the time to apply it, if not done earlier in the fall; and the time is propitious for cutting off shoots from stems below the head, the tree having finished its growth

for the year. In France copperas has been tried

# GRATEFUL LETTER, WIT AND HUMOR.

Attorney for the Defence-Now, what time was it when you were held up? Complainant-I don't know; ask your client-he took my watch!

"Is Bob Knockout a widower?" "No. Why do you ask?" "I heard someone say that his fight-ing days were over."

Mistress (who had given her maid a ticket for the theatre)—Well, how did you like the performance, Alma? Alma—Oh, it was splendid, ma'am. You should have heard how a ser-vant girl sauced her missus!

Mrs. Littlewit (proudly)-Only just think, Charles has gone to address a public gathering. Friend-I didn't know he was a

speechmaker. Mrs. Littlewit-Nor I; but he's been called upon to make a statement be-fore a meeting of his creditors.

At the Metropolitan Museum-Un-derhill (a crusty old bachelor)-There, that's Minerva, the goddess of wisdom. She never got married. Artful Widow-No; but this is King Solomon, the wisest man that ever lived. He married a thousand times.

About it-"Thy slender waist!" he ex exclaimed, soulfully. A rich flush suffused her cheek. "What," she fal-tered, "are you going to do about it?" And perhaps he didn't do a thing.

If a man is willing to pass for what he is he will never fear being found out..-Ram's Horn.

"Do you take any stock in Easter?" asked the stranger as he seated him-self to have a long talk with the

merchant. "No," answered the merchant, "but I usually take stock after Easter, so as to see what my condition will be after settling up millinery bills."

"No," said Smallwort, "I hardly feel justified in saying that Peppers is inordinately vain, but when a fellow has a music box in his room arranged to play "Hail to the chief" as soon as he opens the door, what is one to think of him ?"

She-Oh, my! there's something gone down my back! He-It's one of those thundering bugs, I suppose. "No; I guess it's one of those light-ning bugs, George."

THE HEAVY END OF A MATCH. "Mary," said Farmer Flint at the breakiast table as he asked for a second cup of coffee, "I've made a discovery." "Welk, Cyrus, you're about the last one I'd expect of such a thing, but what is it?"

"I have found that the heavy end of a match is its light end," responded

After reading the above letter we sent a reporter to interview Mrs. Perry, and she repeated what she had already stated in her letter. Her husband, William Perry, and her father, Mr. J. H. Lander, J. P., and Fishery Warden, corroborated her statements.—Ed. L'Impartial. Dr. Williams Pink Pills for Pale Peo-ple meter pure rich blood. restore

of a match is its light end," responded Cyrus with a grin that would have adorned a skull. Mary looked disgusted, but with an air of triumph quickly retorted, "I've got a discovery, too. Cyrus. It was made by Dr. R. V. Pierce, and is called a 'Go den Me ical Discovery.' It drives away blotches and pimples, purilies the blood, tones up the system, and makes one feel brand-new. Why, it cured Cousin Ben, who had consump-tion and was almost reduced to a ple make pure, rich blood, restore shattered nerves and drive out disease. They cure when other medicines fail and are beyond all question the great-est life-saving medicine ever discov-ered. Sold by all dealers, but only in heres and wronger cured Cousin Ben, who had consump-tion and was almost reduced to a skeleton. Before his wife began to use it she was a pale, sickly thing, but look at her; she's rosy-cheeked and healthy, and we'ghs 165 pounds. That, Cyrus, is a discovery that's worth mentioning." boxes and wrappers around which bears the full trade mark, "Dr. Wil-liams" Pink Pills for Pale People. Pills offered in loose form, by the hundred, or ounce, are imitations and should be avoided, as they are worth-less and perhaps dangerous.

Young or middle-aged men, suffering from premature decline of power, how-ever induced, speedily and radically cured. Flustrated book sent, securely sealed, for 10 cents in stamps. World's D'spensary Medical Association, Buf-falo, N. Y.

A Dizziness Would Overtake Me. would be. During these spells of

I would be. During these spells of dizziness I had a roaring sound in my head. I took medical treatment, but found no relief. My husband and father both drew my attention to the many articles which appeared from time to time in your paper concern-ing the cures wrought by Dr. Wil-liams' Pink Pills. At first I had no faith in them, in fact I had lost faith in all medicines, and was resigned to my lot, thinking that my days were numbered in this world. Finally, however, I consented to try the Piak Pills. I had not taken them long before I felt an improvement and hope revived. I ordered more and continued taking the pills for three months, and I must say that to-day continued taking the phils for three months, and I must say that to-day I am as well and strong as ever and the many allments which I had are completely cured. I attribute my complete recovery to the Dr. Wil-liams' Pink Pills, and hope by telling you this that others may be bene-fited by them. Mrs. William Perry.
