

**STANLEY'S
Coal-Heading Machines**

THESE machines have been long introduced in the Coleries of Great Britain, invariably proving their superiority to hand labour. They are the only machines tunnelling in coal anywhere. They save time, labour and coal; make straighter and better roads than is possible by hand; do away with explosives; and with compressed air as the motive power, ventilate their own headings. They are made in all sizes, from 4 feet diameter, upwards.

No. 1. Cuts an annular groove around the face of the heading, forming a cave which either falls or is got off as the work proceeds. There is ample room at the side for the passage of men and material. In favorable seams a distance of a yard an hour is accomplished.

No. 2. Same as No. 1, but with stronger and slower cut; for seams with large stones or strong binds.

Stanley Bros., Nuneaton, England.

TO MINERS AND OTHERS.

**BANNERMAN & POWERS
Vulcan Boiler Works**
428 and 340 Wellington St., Ottawa.

MANUFACTURERS OF
IRON and STEEL BOILERS
