

not been arranged. This, together with changing rules, will be one of the important things that will come before the General Committee and this Society early this term.

And now, regarding interesting material for these meetings, it is a part of the duty of the General Committee to arrange work for the meetings, and yours to second them in their endeavor. One of these will call upon each of you to render something. If they miss you, volunteer. Will you? None need refuse. We have had in the past, I might say, equally good papers from first, second, and third year students. Very few of us but know something of general interest that others do not, the preparation and giving of which would improve the giver and instruct the others. Our offering need not attempt to exhaust the subject of which it treats. This is not expected. If we even cannot do as well by trying as others, let not that be to our discredit, but his who could but would not.

Our corresponding-secretary, Mr. G. E. Sylvester, has been instructed by your General Committee to correspond with Dr. P. H. Bryce, Secretary of the Provincial Board of Health, who has volunteered a lecture upon a very interesting subject at one of our early meetings. He will also correspond with our graduate members, and invite papers from them for our Society. He has also short letters from each of our two past presidents, that he will read at your convenience.

And now we wish to express loyalty to the charge of our predecessors' work and desires, compatible with the best interests of the Society and the good of the members and students; deference and honor to the merits and opinions of teachers, members and students; fairness in all dealing, and confidence in the judgment and support of our General Committee and yourselves in maintaining the usefulness and reputation of this, our Society, for this year and the years to follow.

J. K. ROBINSON.
