

U. S. GOVERNMENT REPORT ON CONCRETE BLOCKS.

A wall constructed of good concrete blocks is as strong and stronger than a brick wall of equal thickness.

Concrete blocks, being easily molded to any desired form, will prove to be a far more economical building material than stone, which has to be dressed to shape.

Experience has proved concrete to be a most excellent fire resisting material.

Concrete blocks, being hollow, tend to prevent sudden changes of temperature within an hour, making it cool in summer and easily heated in winter.

The hollow spaces provide an easy means for running pipes and electric wire. These spaces may also be used wholly or in part for heating and ventilating flues.—Bulletin No. 235 U. S. Department of Agriculture.

The American-Canadian Oil Company must indeed have struck a good field at Egg Lake, where they are carrying on operations, if, as it is claimed, during the process of their boring, they have already discovered a tar sand deposit in a sufficient quantity to asphalt an eight-foot roadway around the world.
