No. 1286

"The Canadian farmer hands his money to the Canadian manufacturer, who in turn pays wages to his employees. The money is then turned over to the Canadian merchant for produce bought from the Canadian farmer. Therefore, money paid out by the Canadian farmer for Canadian-made machinery comes back to him in actual cash, and in the form of better markets for his produce. Money paid for foreign-made machines is immediately sent out of the country, perhaps never to return."

The Renfrew Truck Scale

Short weights come out of your profits. To make sure of your profits, you must know, not guess, the exact weights of the produce and live stock you sell. The Renfrew weighs anything from a pound to a ton. It weighs accurately on even or uneven ground. After weighing you can truck the produce to the wagon. Write for scale booklet.

The Renfrew Starite Gasoline Engine

Faster moving farm production and scarcity of farm labor are only two out of many reasons for using the up-to-date farm engine. Let the Renfrew Starite run your cream separator, pump the water, saw wood, fill the silo and take care of all the power jobs in the barn and tool house. The Renfrew Starite is always dependable. Write for booklet.

AGENCIES ALMOST EVERYWHERE IN CANADA

Practical Patriotism

In these times of national stress, the Country implores the people to conserve every resource. Keeping your money investments confined to Canada is splendid patriotism, and good sound business too. Besides, you can easily prove to yourself that it is profitable patriotism for you to invest in the

Standard

—the machine that is entirely made and designed in Canada by Canadians. Every cent you invest in the Standard helps to maintain Canada's own resources and to build up her strength. But the Standard relies not upon your patriotism alone.—

The Standard saves one half-pound of valuable cream per cow per week over other machines. By its unequalled close skimming it gets all but one-tenth pound of butter-fat from 1,000 pounds of milk skimmed, while other separators lose one-half to a whole pound.

This saving may seem small until you realize what it means to you. With, say, eight cows, it mounts up to four pounds of extra butter-fat every week. At 30 cents a pound, butter-fat price, you make an extra profit of \$1.20 per week, or, in 40 weeks of milking, \$48.00. We will accept this amount as first payment on your new Standard. *With eight cows, your Standard pays for itself out of savings! Will it not pay you handsomely to replace your old machine and get the Made-in-Canada Standard?*

The Standard's close skimming is proven by Government Dairy Schools Tests. We are always glad to have the Standard tested beside any other separator, wherever made.

Send for interesting literature, also describing the Standard's self-oiling system, low supply can, interchangeable capacity, etc., etc.—features that are creating a big demand for this Made-in-Canada machine all over Canada, in the United States and other countries. Write to-day.
