Family and Household.

"Brown Guano."

A profitable source of vile income has lately been declared illegal in Egypt. The wise men of the days of the Pharaohs believed that after 3,000 years people would return to animate their earthly bodies, which it was therefore of the highest importance should be preserved for reanimation. Accordingly while all the wisdom of the most skillful chemists was enlisted in the preparation of wealthy mummies, in case of the poor the bodies were merely saturated with bitumen, or natron, baked in an oven, swathed in woolen rags, then tied up in a mat of palm leaves and laid away to rest in the great sepulchres in rows of thousands. While the mummy Pharaohs, their powerful relatives and haughty priests and nobles have thus been preserved to serve as mummies for the museums of every town in the barbarian world, are converted into pills and powders for the healing of various diseases, or into charcoal to be used in refining sugar, the most hideous form of utilitarian desecration has been shown by the degenerate Egyptians of our days in selling the tens and hundreds of thousands of lower-class mummies to merchant vessels at so much per ton to fertilize foreign fields. From the innumerable tombs near Memphis and in other parts of Egypt, long strings of camels were employed until quite recently in openly carrying this human bone dust to vessels in the harbor at Alexandria; while large quantities of such human remains, under the name of "brown guano," were brought to the vessels in cargo-boats from the ancient sepulchres and canals, which honeycombed the rocky ridge near Alexandria itself. The vile trade was carried on without any attempt at concealment or disguise, and visitors could see human bones, glass jars and earthenware vessels, which had all been laid away perhaps before the days of Joseph, shovelled up together with the accumulated brown dust, carried up the ships' sides in baskets and dumped into the hold to be conveyed to England where the regular price was 25 lbs., or about \$32 per ton—a price that gave the manufacturers of fertilizers a good profit by mixing the stuff with Peruvian guano.

The Latest Crop Estimate.
By the 10th of each month the Department of agriculture has analyzed and formulated the results of its crop reports for the previous month. The average of Spring wheat is 97, the same as in 1882, but higher than that for any previous August since 1877.

The condition of oats is now advanced from 99 to 100—a figure surpassed only last August since 1878. The average for barley is 95, the same as in August last year, but higher than in any previous August since 1874. From present indications the potato crop will be immense, the condition averaging 101. The promise, however, is better in Central States, where the soil in the Northern border where the soil has been saturated with moisture. The area under buckwheat is equal to last year's and the condition is high, represented by 99. The average condition of tobacco is 88. The condition of cotton is low in every state except Virginia, the average having fallen from 90 to 80.

A cablegram from the London statistical agent of the Department says the weather has been unsettled during the first 10 days of August, and the temperature has been low for the time of the year. The wheat stocks are largely accumulating. The quality of the new crop is fair; but the yield will be short. The total output of the European wheat will be one-fifth less than last year, and one-tenth below the average. German, French and Russian advances are worse accordingly to the agent; though other advances will hardly support this opinion.—*Rural New-Yorker.*

Price of Cattle.
The decline in the price of cattle is the subject of depreciation or congratulation as the speaker is seller or buyer—a producer or consumer. Although live stock has increased here even in greater ratio than our population, the present fall cannot be due to over-production, for beef is still seen on millions of tables much more rarely than it ought to be. The fact is that there was a "boom" in beef last year; prices too high in view of the cost of raising cattle, and they are now falling to the legitimate level—accommodating themselves to the general law of average, which applies to the cattle interests as well as to all other stable interests of the country. Last year the country enjoyed a "boom" in nearly all agricultural products, and now there is a general tendency to shrinkage in values. While stock is low in comparison with prices in 1882, it is still high in comparison with those of 1880 and 1879, and is by no means below the limit of profitable production.

Using Ostiches.
The San Francisco Grocer says that the experiment of raising ostiches in that State appears to be progressing favorably. A number of young ostiches have been hatched and are said to be all dead.

Treatment of Premature Baldness.
In the Berliner Klin. Wochenschrift, April 16, 1883, Dr. Lassar discusses the etiology and treatment of early baldness, and advocates premature. From observation and experiment upon animals it was found that the disease is contagious, and occurs independently of any general affection of the state of health of the patient. The method of treatment recommended is as follows: The scalp is to be washed every day with tar soap, or soft glycerine soap, or with soap containing sodium iodide; the soap is to be thoroughly applied and rubbed over the scalp for fifteen minutes. Following this is a warm douche; then by the application of a corrosive sublimate (two parts per one thousand) the hair is dried, and a half per cent. spirit solution of naphthalene is rubbed into the scalp. The use of Phosphoric, or salicylic acid may also be applied if desired. If this treatment be adopted in the early stage, when the hair is just beginning to fall, it has usually proved successful, but it must be kept up for eight weeks or more. The fact that this disease is due to a communicable morbid principle has been brought up in order to show its conveyance by the comb and brush of the barber.

Live Stock and Grazing Land.
Still the enormous transactions in live stock and grazing lands go on. The following reports are current: Down & Allen, of Montana, have purchased 8,000 head of Sparks & Tinnin, of Nevada, have bought out a ranch and stock for \$900,000. Charles Goodnight, of Texas, has gradually accumulated 40,000 head and owns a million acres of land. Con Kohrs, of Montana, has bought a two-thirds interest in 12,000 head for \$266,000. And many more items of the same kind might be gathered as current news.

The Harvest Prospects in England.
The London Times, in reviewing the harvest prospects in England, estimates that wheat and barley will be below the average crop. Mr. H. P. Moore reports that the yield of wheat will be 31 per cent. below the standard average per acre, and that of barley 6 per cent. below the average. The yield of oats he says, will be six per cent. above the average, and that of potatoes 20 per cent. above.

RACKED BY INNUMERABLE PAINS, restless by day, sleepless at night, rising unrefreshed in the morning, without appetite, and pestered by varying and perplexing symptoms, the dyspeptic takes indeed a gloomy view of human existence. For him the cost of life seems great. Heartburn, oppression at the pit of the stomach, and the attendant annoyances of constipation and biliousness, combine to render him utterly wretched. But there is, if he will but take advantage of it, a reliable source of relief from all this misery. Nostrum & Lyman's Vegetable Compound, and Dr. Williams' Pink Pills for Pale People, are, as its name imports, a botanical preparation, free from mineral, chemical, and all impurities of any kind, and is adapted to the constitution of the food received into the system, but deprives it of increasing the action of the bowels and kidneys, the natural outlets for its impurities. But while it relaxes the bowels, it never does so violently and with pain, like a drastic cathartic. It aids, not merely by its laxative action, but as well as purifying and regulating the system. It thoroughly removes those diseased humors which tend to vitiate the blood, purifies the urinary secretion, and promotes a flow of healthy bile into the circulation. Experience has proved that this standard medicine is a thorough remedy for dyspepsia, scrofula, erysipelas, salt rheum, humors and all impurities of the blood. Price, \$1.00. Sample Bottle, 10 cents. Ask for Nostrum & Lyman's Vegetable Compound, and Dr. Williams' Pink Pills for Pale People. The wrapper bears a fac-simile of their signature. Sold by all medicine dealers.

COQUETING WITH CONSUMPTION.—Some people, troubled with coughs seem absolutely to coquet with consumption—now encouraging it by a total neglect of medicine, and again attempting to stave off with ill-chosen cough remedies. How much wiser to eradicate it at the outset by using Nostrum & Lyman's Emulsion of Cod Liver Oil and Hypophosphites of Lime and Soda. Promptly cures the cough, and this medicine cannot be strongly urged as a climate so severe during the winter as our own. The public generally as well as the medical fraternity, is acquainted with the value, as a remedy for lung and throat troubles, of the purified oil of the Cod Liver. United with it in this standard Emulsion are the finest tonics in existence, namely, lime and soda hypophosphites, of which the chief component, phosphorus, is an incomparable nutrient of the blood, and invigorant of the system. Nothing builds up a broken-down system and enables it to resist the inroads of pulmonary disease like this leading preparation. Coughs, colds, asthma, bronchitis, sore throat and weakness of the chest, are among the bodily troubles which it overcomes, and in scrofulous affections it has been used with great success as a remedy. Sold by all druggists, at 50 cents and \$1.00 per bottle. Prepared only by Nostrum & Lyman, Toronto, Canada.

—The Christian religion, though it has made great advances during the last century, still includes less than one-third of the population of the globe among its adherents. The present estimate by the best German statisticians puts the total at 1,500,000,000 of whom 450,000,000 are Buddhists, 235,000,000 Mohammedans, 247,000,000 heathens, 225,000,000 Roman Catholics, 140,000,000 Protestants, 110,000,000 Brahmins, 45,000,000 Eastern (Catholic) churches, and 8,000,000 Jews.

General Williams.—A Historical Sketch.
(London Times.)
The death of General Sir William Fenwick Williams, of Kara, revives some of the most stirring memories of the Russian War of 1854. The events of that war are fading fast into the oblivion of history, a whole generation has grown into manhood since it was waged, its effects have been largely obliterated by the subsequent march of events, and its interest and importance have been completely eclipsed by the gigantic military enterprises which the world has since witnessed. But eight-and-twenty years ago when Kara had just been gallantly defended and honorably surrendered by the veteran who died on Wednesday in the fullness of years and of honors, the whole country rang with the fame of his heroic achievement. Paradoxical as it may seem, the gallant defence of Kara by Williams, unsuccessful though it was in the end, was regarded at the time as almost a greater glory for England than the capture of Sebastopol itself. Williams and his staff were no sooner released from their captivity in Russia than they became the heroes of the war. They had defended the place for months against an overwhelming Russian force, commanded by a skilful general; they had infused a spirit of extraordinary endurance into the half-starved and ill-equipped Turkish troops who formed their only garrison; they had twice repulsed the determined assaults of their besiegers, and they had capitulated at last, not because they were vanquished in battle, nor because their fortifications had been breached, but because their food was exhausted, and there was no prospect of relief from the winter quarters.

He was appointed British Commissioner to the Turkish forces, and in this capacity he was attached for a short time to the headquarters of Lord Raglan at Varna, when the allied troops were camped there, in the summer of 1854, before the expedition to the Crimea. He was detached to Erzeroum and in 1855, having, after considerable hesitation and delay, been nominated Ferik, or General, by the Sultan, he assumed the virtual command of the Turkish troops beleaguered at Kara. When Williams appeared at Kara, invested with substantial rank and authority, the Pashas at that place soon found they had met their master. He found corruption and speculation universal, but by dint of successful vigilance and energy he gradually brought order out of confusion, inspired the troops with confidence and the delinquents with remorse, and undertook the vigorous defence of the fortress. "Veiliansh," said a Kurdish chieftain to Dr. Sander with on his journey across the Caucasus, "I have seen the Pashas eat dirt and fed the Karais with fine flour"—and the sentence accurately describes the change wrought by Williams in the defence of Kara. Twice during his command of the city did the Russian troops attack it in force, and each time they were repulsed with great loss, first on the 17th June, and secondly on the 29th of September, when the beleaguered garrison had long been on short rations, and were beginning in their hunger to feed on the scanty scraps they could find in the fields accessible to them. At last, on the 25th of November, General Williams, who had long buoyed himself up with hopes of relief either from Selim Pasha at Erzeroum or from Omar Pasha, who had landed at Soukum Kale, having convinced himself that no such relief was forthcoming, rode out to the camp of General Mouraviev to arrange terms of capitulation. Mouraviev received him with honor, and granted terms worthy of a garrison which had so gallant and determined a defence. "Look here," he exclaimed, pointing to a lump of bread and a handful of roots, "what splendid troops must these be who can starve to their arms in this severe climate on food such as this!" General Williams, who had "made yourself a name in history," and "posteriorly will stand amazed at the endurance, the courage, and the discipline which this siege has called forth in the remains of an army."

Among those who did good service in the defence, besides Williams himself and his English colleagues, were two Hungarian officers, General Kmetz and General Kmetz, man—otherwise Feiz Pach—who had taken service under the Porte. They had certainly rendered gallant assistance to Williams, and it was subsequently held by some that the chief merit of the defence was due to the efforts of these officers. These officers were not included in the capitulation, because fearing that, if they surrendered to Russia, they might ultimately be given up to Austria, they had, with the full permission, and indeed, by the advice of Williams, made their escape to

Erzeroum a short time before the capitulation was arranged. In his despatches describing the siege Williams made but little mention of the services of General Kmetz, and when, some time afterwards Kmetz published his own account of the defence of Kara and openly complained that Williams had neglected to do him justice, it seems to have been felt in many quarters that the English hero of Kara might have been more generous in his recognition of the services and assistance of his Hungarian colleague.

Slaughtering Buffaloes.
Great Danger that these Animals will Soon Become Extinct.
From the Helena Independent.
In going down the Yellowstone and across the vast region lying between Glendive and Mandan, one is struck with the evident scarcity of game. This famous region, where two or three years ago, herds of buffalo, antelope, and deer were to be seen on every side, is now to all appearances stripped of its game. For the entire distance from Livingston to Mandan only saw two or three small bands of antelope, and not a sign of a deer or buffalo. The fact is, the slaughter of buffalo and deer has been immense for the past two years, and particularly of the former. It is estimated that during the past year there have been over a thousand hunters engaged in the business of slaughtering buffaloes along the line of the Northern Pacific between Mandan and Livingston. An eagle-eyed hunter got the carcass of the trail of a deer and he gave me the following interesting details as to the modes operandi in slaughtering herds of buffalo:
In the first place, the experienced hunter uses the Sharps rifle, 49.90 calibre. With this he can kill at 1,000 yards. When he sees a herd of buffalo he usually slips up to within convenient range, from 300 to 500 yards, and always selects a cow for his first victim. He does this for the reason that the cow is followed by both her yearling and two-year-old calves, and they will usually stand by her to the last. But under no circumstances will the experienced hunter kill his buffalo outright. If he does, the herd will stampede at once. The policy is to follow the herd, and when they are fatigued, and in a circle before falling. This it always does when mortally wounded, and after a few moments lies down. The remainder of the herd are not alarmed at this, but continue to gaze or look on in amazement at the tragedy being enacted. After his first shot, the hunter pauses until quiet is restored, and again fires at another cow with similar results. He always aims to put his ball just behind the fore shoulder, which will cause death in five minutes at farthest. The cows have all been slain, he then turns his attention to the calves, and lastly to the bulls. The experienced hunter generally bags his entire herd unless he is so unfortunate as to lose his game immediately, when all the survivors stampede at once. The buffalo does not scare at the crack of a gun. He has decidedly more courage than discretion. It is only when the crack is followed by an immediate fall that he is alarmed. He is not so easily alarmed. The policy of killing the cows first and then the calves has resulted in the almost utter extinction of the female buffalo. Herds of melancholy bulls can still occasionally be seen, sometimes in bands of twenty or thirty, and often with a single cow. The few remaining cows always choose from the young bull of the herd.

The buffalo bull after he passes his fourth year loses his attractiveness to the opposite sex, and the region acquires to be neutral. Gathering about him his bachelor friends of equal age, he sullenly retires into the wilderness and forever avoids the female members of the herd. As I have said, the bulls are about all that are now left of the herd. I am not sure that the safety to the fact that their hides are less valuable than those of the cows, while at the same time they are far more difficult to kill. The hide of the bull is only worth to the hunter from \$1.50 to \$2.00, while that of the cow brings \$3.25, and that of the two-year-old calf is worth from \$1.00 to \$1.50. But of late there has sprung up quite a demand throughout the East for the head of the buffalo bull. The well preserved head of the aged bull, decked out with glass eyes and horns intact, will readily sell for \$25 in the Eastern markets. Consequently the buffalo hunter of the future will wage a destructive war upon the bull tribe, and these venerable relics of a bygone era will also pass swiftly away.

Suffering Children.
Many children live lives of suffering from being troubled with Worms. McLean's Worm Syrup is as effective as well as a pleasant remedy. At nearly all druggists.

Dr. Frank L. Rea's Death.
He Detects a Carbuncle on his Lip—Then Locks his Office and Goes Home to Die.
CHICAGO, Aug. 12.—Dr. Frank L. Rea, assistant demonstrator of anatomy in the College of Physicians and Surgeons, died on Friday of malignant facial carbuncle. His death has attracted a great deal of attention from medical men in the city. The history of his affliction was related by one of his associates. On Tuesday, July 31, he was sitting in his office when he felt a pricking sensation on the left side of his upper lip. He went down stairs to a drugist, and asked him to pluck a hair out of his mouth, and he complied with the request, and, when he had plucked the hair, Rea looked at his bulbous end, and said: "Mr. Jacobson, that is the last of me; it is a facial carbuncle. I will look up my office, bid you good-by, and go home to die."

The drugist laughed at him, but the young physician looked his card and went away, leaving a card that he did not know when he would return. He went at once to his uncle's house and told him what he had experienced, adding: "I am done for, I will never have another well day, and will be dead in ten days."

The family laughed at him, but he retorted by drawing out his diary and writing this: "Carbuncle started on my lip. I know what it means. No post mortem, if you please."

Beneath the entry were two numbers corresponding to pages in a standard author, in which the remarkable fatality of the disease is spoken of. The Doctor had got his intimate acquaintance of the disease by treating the case of a fellow-student, Mr. Eagle, which ended fatally at the hospital a year ago. After making the name in time on the other side of his lip. A day or two afterward it was opened and cauterized. The disease remained indifferent for a day or two. The Doctor's temperature then arose to 134 and his pulse to 140. He went to bed on Monday, and was in a comatose condition from that time until he died, five days later. Death was due to the facial veins absorbing the poison of the sore and carrying it to the brain, where it formed a fungus growth that pressed upon and, by the sympathy of the nerves, caused his features to swell beyond recognition, the eyes being pried almost out of the sockets.

NEW SPRING GOODS.
THIS subscriber, by his recent importations, has now completed his Spring and Summer Stock. Customers will find it to their advantage to give him a call.

Ready-Made Clothing,
Of Every Description, for Everybody.
Ladies' Dress Goods,

1883. EXHIBITION. 1883.
St. John, New Brunswick,
Commencing Oct. 2nd, 1883.
Open to Exhibitors from every part of the Dominion.
The Dominion Government, the Provincial Government, and the City of St. John, have granted liberal Grants of Money towards the Exhibition, and the erection of Splendid Permanent Buildings in addition to those already on the ground, and for the general success of the Exhibition. The Exhibition will be open for all kinds of Agricultural Products, Live Stock, Dairy Products, Machinery and Manufactures in Metals Wood and Textile Fabrics, Domestic Manufactures, and Fine Arts.
Freight will be carried at Reduced Rates in the Buildings and Stalls given for this will be the largest and most thoroughly representative Exhibition ever held in the Maritime Provinces, and will be an excellent opportunity for the Manufacturers of the Dominion to show their productions to the people of the Lower Provinces. Premium Lists and Circulars, giving full particulars, will be sent shortly, and sent everywhere free, on application.
