1. The first volume of the series, published in 1950, was devoted to the study of the structure of the atom. It was edited by the late Professor Robert Serber and the late Professor Hans Bethe. The volume contains a collection of papers on the structure of the atom, including the structure of the nucleus, the structure of the electron, and the structure of the atom as a whole. The volume is a classic work in the field of atomic physics and is highly recommended for anyone interested in the subject.

2. The second volume of the series, published in 1951, was devoted to the study of the structure of the nucleus. It was edited by the late Professor Robert Serber and the late Professor Hans Bethe. The volume contains a collection of papers on the structure of the nucleus, including the structure of the nucleus, the structure of the nucleon, and the structure of the nucleus as a whole. The volume is a classic work in the field of nuclear physics and is highly recommended for anyone interested in the subject.
