I

New Design Optical Instruments

- 1 Contact has been made with a Dutch civil technician in the employment of H.V. Optische Industrie "De Cude Delft", Delft, who has, during experimental work on X-ray eqpt, invented three new optical devices.
- 2 A short description of these devices is att, also photographs showing the detail given to object at long ranges.

II 3 DW

1. The purchase of inventions does not fall within terms of Inv Bd from the right to negotiate with other than Cdn Army of personnel
2. Possibly the High Commission would be interested
- 3 Although the principle applied is not new, it is understood that the ground mirror system has overcome the trouble previously experienced in obtaining detail and definition from such a telescope. The inventor is willing to turn over these inventions to either Great Britain or the United States for war purposes. However, there is no doubt that he would be willing to release these inventions to Cdn authorities, but is naturally interested in a remuneration from his efforts.
- 4 Should you have any interest in this type of eqpt, please notify us as soon as possible so that further details can be obtained.
