A prize fight has been arranged between two well-known bullies of the township of Nepean, county Carlton. It was to have take a place Tuesday, but was postponed until Monday next on account of the police authorities getting wind of the affair. The Queen City rowing club of Buffalo has decided to pay no attention to the telegraphic report from Boston to the effect that Lee, Hosmer, Plaisted and Ross have accepted the challenge issued by the Queen City four to the Goodkin Gaskin crew. If the offer is accompanied by a forfeit within the next week the club will look upon it as official

and will then accept it. Independence and Pleora, Wm. Rockafeller's horses, have been sent to Hartford, where they will remain until after the fall meeting at Charter Oak park, during which the team will endeavor to beat the record made by William H Vanderbilt's Maud S. and Aldine. The latter famous trotters have covered a mile in 2.15½, and Mr. Rockafeller's horses have a record of 2.18½.

A number of the members of the Forest City Bicycle club have organized a touring club under the name of the Ariel club, and will uniform themselves. The fellowing officers have been chosen: President, Geo. D. Cameron; vice-president, J. D. Keenley-side; secretary-neasurer, W. M. Begg; cap-

Seeing Piratical Schooners.

From the New York Times.

The piratical schooner—low, long, rakish, crowded with men and flying the black fly—which suddenly sank off the Jersey coast in the sight of a New Jersey dector is a mystery. The beverages of New Jersey, invaluable as they are to the student of ephiology, have never before produced a sight at all resembling that of a sinking piratical schooner. Hence it is argued that the New Jersey doctor must have come into possession, either by discovery or in some other way, of a new and peculiar variety o apple-jack; and the desire for further information on the subject among our more thoughtful and progressive drunkards is very great.

Bronchitis is an inflammation of the mucous membra e of the bronchial tubes, and is one of the most contained by the property of the property of the bronchit subset of the bronchit subset on the lungs, the disease either end's in bronchitis or pneumonia. If it ends in bronchitis, it usually passes off as a cold in the chest, and still the patient does not feel entirely well. He feels fired and languid, and is incapable of taking his usual amount of exercise, and experiences a shortness of breath, with more or less warmth in the palms of his hands. Soen after this a cough appears, accompanied by an expectoration of thick mucus, followed by a hectic flush, loss of flesh and strength and night sweats continue, when the patient assumes all the appearance of having a genuine case of consumption. But this is simply catarrh of the lungs or chronic bronchitis.

In the latter stage of the disease, the mucous membrane of the larger bronchial tube softens, while in the smaller tubes and air cells of the lungs the mucous membrane tecomes congested and nflamed. There are no cavities or tubercles in the lungs, but merely a wasting away of the larger bronchial tubes, and death takes place from the obstruction of the bronchial tubes and air cells of the lungs. The patient dies from exhaustion and sufficcation, being unable the expectorate the mucous which accumulates in the pessage leading to the lungs, which in some cases is sticky and small in quantity, but more commonly coplous, of a light straw or yellowish areen.
