HOLSTEINS

All bred on the farm

The Glenroe herd is one of the select small herds of Oxford County—with two exceptions, every animal bred on the farm. The females are all young and have never been forced. The records, although not large, were each made under strictly commercial conditions, and only one was made at full age. There is not a two-year-old, three-year-old or a four-year-old but what should increase their record materially at this freshening. If you like to make your selections from a breeders' herd, you should attend this sale. There will be no reserve.

CATALOGUES READY MARCH 5th.

A herd of 13 pure-bred Holsteins last year averaged 18,812 lbs. milk and 638.57 lbs. fat. Do you realize the money there is in such cows? It is estimated that the average annual yield of all cows in this country is under 4,000 lbs. These 13 cows produce as much milk as 62 cows of the 4,000-lb. class.

Why feed, milk and shelter any more cows than you need to produce the milk you require? If interested in valuable information they contain much
