

Children Cry for Fletcher's
CASTORIA

Fletcher's Castoria is strictly a remedy for Infants and Children. Foods are specially prepared for babies. A baby's medicine is even more essential for Baby. Remedies primarily prepared for grown-ups are not interchangeable. It was the need of a remedy for the common ailments of Infants and Children that brought Castoria before the public after years of research, and no claim has been made for it that its use for over 30 years has not proven.

What is CASTORIA?

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrup. It is pleasant. It contains neither Opium, Morphine nor other narcotic substance. Its age is its guarantee. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic and Diarrhoea; allaying Feverishness arising therefrom, and by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep. The Children's Comfort—The Mother's Friend.

A YEAR FOR LIFE
A CANADIAN GOVERNMENT ANNUITY PROVIDES IT

—No better life investment available
—No better security obtainable
—Cannot be called or levied upon for any cause
—Will be replaced if lost, stolen or destroyed
—Not affected by trade depression
—Free from Dominion Income Tax
—No medical examination required
—Anyone over the age of 5 years resident or domiciled in Canada may purchase.
—Any two persons may purchase jointly.
—Employers may purchase for their employees—school boards for their teachers—congregations for their ministers.
—Apply to your postmaster; or write, postage free, to R. T. Stutsell, Superintendent of Annuities, Ottawa, for new booklet and other information desired. Make out and sign last birthday.

FAIRS ADVERTISE YOU

Both the Community and the Exhibitor Get Publicity.

It Pays to Let Others Know That You Have the Goods — Fighting the Hessian Fly—The Silo a Proven Utility.

(Contributed by Ontario Department of Agriculture, Toronto.)

To the general farmer who grows good grain for seed, to the specialist in garden and truck crops, and particularly to the live stock man, the Fall Fair offers an opportunity. It pays to advertise; the Fair is the place where the people see the goods produced, and seeing is believing. Moreover, the papers report the winnings, and through these the exhibition gets a large amount of advertising free which would otherwise cost him a considerable amount of money. Winning in close competitions under a competent judge adds dollars to the value of stock shown and increases the market price of any commodity, as well as giving the exhibitor a standing not only in his own community but over a section of country corresponding to the size and influence of the show at which prizes are won. The Fair is a good place to make sales. Prospective buyers see the good exhibits made and enquire about the breeding stock at home. Stockmen show at Fairs largely to make sales rather than to win prizes, although the latter is a factor in the sales and they are not disappointed as evidenced by the growing interest in the Fall Fair. Showing at the Fair, coupled with a judicious newspaper advertising policy, which should never be neglected, is good business. The two go together and work hand in hand. It pays to let others know of your good stock. Use printers' ink and show at the Fall Fair.—Wade Toole, O. A. College, Guelph.

Fighting the Hessian Fly.

Growers of winter wheat are advised to practice immediate control measures advocated by the Department experts. The following eight cardinal control measures, if rigorously enforced and adhered to by every grain grower, will prevent the introduction and spread of the pest:

Do not sow wheat on stubble if possible to avoid it.
Plough under all infested stubble and ruined wheat where practicable soon after harvest, especially where this does not interfere with the growing of clover and forage grasses.
Destroy all volunteer wheat by harrowing, disking, ploughing, or otherwise.

Plough all winter wheat land as early and deeply as existing conditions permit, and prepare a thoroughly pulverized and compacted seedbed.

Conserve moisture against a period of drought at seeding time.
Use the best seed procurable.
Keep the soil in good tilth and, most important of all, sow winter wheat during the fly-free period as advised by local farm advisers or experiment stations.

Work in co-operation with your neighbor in fighting this pest, as community action is essential to insure complete success.
Late sowing is recommended, but not too late sowing, as the latter is as disastrous in its ultimate results as is too early sowing. Uncle Sam's grain-disease doctors say that the safe date in a time of normal rainfall usually coincides, in any one locality, with the preferable time for sowing to bring maximum yield. For example, grain growers in northern Michigan and Ontario are advised to sow after September 1, while the producers of southern Michigan and northern Ohio will escape fly infestation if they plant their grain about September 20.—U. S. Weekly News Letter.

Silo Almost as Useful as Barn.

The silo is rapidly becoming recognized as a necessary part of the farmer's equipment. A farm without a silo, at least in the corn area, is no longer up to date. The rapid adoption of the silo is accounted for by recognition of its advantages.
If corn is cut at the proper stage and put into a good silo, the whole corn plant is eaten.

Silage is more convenient to feed than is any other rough feed commonly used on the farm.
Silage is both palatable and succulent.

The addition of a succulent feed to a ration increases the digestibility of the dry feed eaten.
With a silo it is possible to save corn that might otherwise, owing to immaturity, be largely wasted.

The silo not only provides excellent feed in winter time, but furnishes a means of keeping more for summer use feed of high quality.

August Farm Hints.

As the grains are harvested the land which is not seeded should, when practicable, be cultivated on the surface so as to germinate the scattered seeds, hold the moisture, and better fit the land for ploughing in the autumn.

Soil land calculated for winter wheat should be ploughed early in the month and harrowed every week or ten days in preparation.

When picking wild flowers do not take the whole plant. Remember leaves and roots are needed to grow again next year.

We hear much these days about planting shrubbery and flowers and establishing good fruit and vegetable gardens on the farm. They all pay in money value as well as added comfort.
