Learning to Swim.

he head under water, says Kissel Eaton in the Delineator.

"In most strokes the face is under half of the time. Practice at with a basin full of water. Ina long breath through your mouth, plunge your face into the water, exhale slowly through your nose. Repeat until you find it easy to count regularly one while inhaling, three while exhaling.

"In the water practice the "dead man's float." Take a deep breath, ed and what is claimed. tretch your arms out in front of you and fall face down in the water completely relaxed. Next learn to float on our back. Stretch your arms straight out to the sides, bend your head way back and lean slowly against the water. Do not bend at the waist and do not get scared and raise the head, as this will make you sink. As long as you keep your head back and body straight you are bound to float.

When you have thoroughly overcome any nervousness about being under water and have learned that the water naturally holds you up you can learn to swim, to move the arms and legs in definite strokes to gain distance and speed.

"I myself learned to swim as a child. was incorrectly taught by amateurs. One day I happened upon a book on swimming. It inspired me to take up the sport intelligently. First I read the description of each stroke, and practised the motion in my room. After practice. At the very first attempt I ing strong light and moving towards found the breast and back strokes the ray of light coming through the

In the view. third of the decade 1890-1900. The explanation of this startling showing lies in a study of birth rates and landed before him. death rates. For blacks and whites alike the birth rate has been steadily claimed another pastor, when the loud decreasing; but this decrease has snores of a woman occupying a probeen specially marked in the case of minent pew caused a titter throughout being 52.2 per cent. of the whole. Yet in 1919 in Mississippi 14,525 colored people died, against only 8,142 white people. These facts have attracted public notice in the United States and served as a sharp reminder of the necessity of looking more carefully to the welfare of the negro

A Great Shot.

Grouse, Hare and Salmon at Once. "A great shot" was described recently at the London Press Club, according to the London Daily Mail, when Mr. William O'Malley, formerly M.P. for Connemara, was presented with a cheque on his return to Ireland after 52 years' residence in Eng-

Viscount Burnham, who made the presentation, referred to Mr. O'Malley's prowess as a sportsman. "I am told, indeed," he said, "that on one occasion with a rifle he shot at one and the same time a pheasant, a sal-

mon and a snipe." Mr. O'Malley, in response, said: "On one occasion I fired at a grouse, and a hare happened to be in the line of the gun, and I shot the hare. I did not see the hare at all. There was a river in front of me where the salmon was jumping.

"Presently I heard a man by the exclaim, 'That is a great shot, What is a great shot? said I. reply was, Begorra, sir, you have made a great shot and have killed the salmon."

Eyes Transplanted.

cess of transplanting a normal eye in place of a blind one? Viennese medical circles are at present disc this question. As the result of Kolmer, of the Psysiological Institute, explained what has been accomplish-

It has been known that fish, frogs and other forms of aquatic life have power to change their colour in conthat they lose this power on becoming blind. Experiments were conducted on the lines of observing what happened when a normal eye was transplanted in place of a blind eye, and it was found that fish, frogs, etc., recovered their power of adapting themselves to their surroundings, reaction being somewhat slower than in the case of fish with their original

To test whether tihs recovery of the power of adaptability was due to recovered sight and whether sight itself had been really recovered, the fish were put in a tank and a ray of light passed through the water. Fish and other forms of life on which the experiment was tried reacted to light in a manner similar to those animals whih have normal sight, avoiddarkness. It was also discovered that fish, etc., with a transpalnted eye, retransplanted have been mostly from one to another of a similar family, such as from fish to fish, frog to frog, very high form of life. The discovery "In both the trudgeon and the was first made by Theodor Koppanyi, crawl double overarm stroke is used a young Hungarian student at the

A Forest of Gems.

Among the many wonders of the far southwest of America, the Petrified Forest of Arizona must take high rank. On the maps it is called Chalcedony Park, but the people of Arizona always in existence, have been gathered into speak of it as the Petrified Forest. Neither name is very descriptive. It is not a forest and it is not a park; nor are the trees petrified, in the ordinary acceptation of that term, for instead of wood has been agatized.

It is probable that the forest once covered hundreds of square miles, for agatized trunks, logs, and bits of wood are found throughout a great radius of country. It occupies now about a thousand acres. None of the
