**A PRACTICAL PLACER MINING MACHINE.**

No man or Company should leave for Klondike or any other Placer district, without first examining this machine and seeing its wonderful adaptation to the saving of mineral and labor which it is accomplishing every day where it is used.

**THE KLONDIKE AND NORTHWESTERN MINING AND SUPPLY COMPANY** claim that this machine is destined to revolutionize the whole system of Placer mining.

**I**T is particularly adapted to the saving of fine gold, and it is so constructed that the sand is thoroughly washed from the gravel without using the large volume of water required by the old sluice box method and, thereby, spreading the sand and gold over the amalgamating surface, with positive assurance that it will all be saved.

The machine has a capacity of 40 tons daily, thus enabling the working of any gravel which would be very low grade with the old-fashioned rocker, tom or grizzly. An experienced miner knows that gravel to be considered pay, does not depend entirely upon the ground values, but rather on the expense of handling tonnage, thus dirt paying say \$2.00 per day, rocking 1½ tons by old-fashioned methods, will pay handsome returns if, with the same labor in reduction, the miner handles 40 tons, or about 27 times the quantity equal to nearly \$54 per day.

The machine is easily transported to any point accessible by man or mule, and can be put in operation in a few minutes' time.

The power required to run one machine is one man. One horse will run several machines.

For simplicity, durability and economy it cannot be surpassed.

**A**FTER many years of study and investigation, we have succeeded in producing and placing before the public a high-grade washing, concentrating and amalgamating gold-saving machine, the method and operation of which has been conceded by expert engineers to be the most practical and economical of any gold-saving machine ever invented.

We claim that its superiority over all other machines consists in its adaption to be worked under the most unfavorable placer-mining conditions, and in possessing the following advantages, which no other machine can claim, viz:

The machine can be run by steam, horse or hand power.

Little water is required, one miner's inch being sufficient, and, if desired, the same water can be used over and over.

The machine pumps its own water from the stream, well or tank as required, it not being necessary to build ditches, flumes or make any permanent improvements.

**Price of Machine, Vancouver, \$250.  
 Weight, 450 lbs.**

**TERMS:** One-third cash with order, balance draft with bill of lading.

**NOTE:** The above price covers the complete machine. Extra parts extra. The inspection of our machine in operation at our office solicited.
