

Fig. 110. No. 28.

*Cranioscopy.**Craniometry.*

		Millimetres.
Age, 25.....	1	182.5
Sex, female.....	2	134
Sutures, serrations simple.....	3	140
Pterion, H.....	4	91.5
Inion, depressed instead of elevated, and internally presents no elevation corresponding to external depression.....	5	98
Artificially lengthened occipital foramen, E....	6	110
Lateral parietes, moderately full.....	7	10
Glabella, small.....	8	111
Superciliary ridges, medium.....	9	125
Frontal eminences, indistinct.....	10	80
Forehead, straight.....	11	42
Median line, raised from bregma to point situated between parietal foramina.....	12	293
Probola, slightly curved.....	13	218
Sub-iniac curve, extends below condyles.....	14	287
Mastoid process, short, thick.....	15	505
Hollow at root of nose, medium.....	16	78
Inferior border of nares, narrow, sharply curved grooves.....	17	134
Wormian bones, two present, one in parieto-mastoid suture, and another at lower end of lambdoid suture on right side; both small.	18	52
	19	27
	20	73.4
	21	68.2
	22	93.3
	23	76.7
