

# SWEEPING THE FIELD

The almost universal "sweep" of the field by the IMPROVED DE LAVAL CREAM SEPARATORS in 1908 is being repeated in even greater volume in 1909.

The big "broom" of DE LAVAL improvements and all-around superiority is fast "sweeping the field" clear of would-be competing separators, made up mainly of inferior variations of discarded or abandoned DE LAVAL inventions, the most of which, while DE LAVAL originated, were never good enough for actual DE LAVAL use even 10 to 20 years ago.

The Improved DE LAVAL is simply in a class by itself—ten years ahead of the field of all attempted competition—and not to have seen it is simply not to have seen the perfect up-to-date cream separator.

The next thing to a DE LAVAL machine is a DE LAVAL catalogue—and anyone need but ask for it.

## HOW THE VERY LIFE IS EATEN OUT OF MOST ROOFING.

Not two Roofings in a hundred can withstand the slow, secret, dangerous attacks of acid—a deadly enemy to most Roofing. Because few Roofing makers care to spend the extra money necessary to make such Roofing. Acids are caused by green or damp hay, or the cattle in your sheds. These cattle sweat, producing vapor which contains acids and gases destructive to most Roofing. These enemies attack the underside—which is weak in most Roofing—and does its ruinous work where you cannot see it, till too late. The first you know that it is not what the fellow claimed is the startling sight of a million "pin-holes" all over. Examine the Roofing of your barn now—you'll likely find this defect. This is caused by weak insides, which should be the strongest part, but the portion hopelessly slighted by most makers because you won't test it. Nearly all Roofing, except Brantford, has a foundation wood pulp, jute, cotton cloth, etc., which cannot absorb sufficiently. It possesses nothing to hold it together, and is coated with cheapest covering obtainable: animal fats, greases, oils, tar, or some other refuse. These dangerous coatings are so weak that they are readily at the mercy of the acids. And the foundation! It has no barrier! It has already wilted. No amount of supposedly preventatives can save this Roofing. It is bound to go to pieces sooner or later and just when you least expect. Most Roofing makers will try to avoid the issue if asked to show insides of their Roofing. But we encourage tests of Brantford Asphalt Roofing. There are no secrets, nothing that you shouldn't know. The foundation of Brantford Asphalt Roofing is long-fibred, evenly condensed pure wool. Asphalt is forced into wool, soaking every fibre. It is heavily coated with special waterproof coating into which Silicia Sand is rolled under pressure. Brantford Asphalt Roofing is wear resisting, fire, water, weather, acid and smoke-proof. Rain or snow can't freeze or crack it; heat of sun cannot melt it. Its pliability prevents cracking or opening at seams. There are many other Brantford superiorities. Our Big Roofing Book with Brantford samples is free. Write us or your dealer now.

## THERE ARE DOLLARS IN DAIRYING

If you have the means of getting these dollars. It is only a few years since cows hardly paid for their keep. Today the cow is the standby of the farmer. The Cream Separator has done it.

But all cream separators are not the same in the dollar-results they obtain. A Cream Separator, to get these dollars, should be easy to turn, easy to clean, sanitary, simple, safe and durable. That describes the
