

The Acton Rubber Ltd.

Flying Boots 3060G11

Both air and ground crews appreciate the environmental protection offered by Acton's flying boots. Worn over combat or safety boots, they provide good cold weather defence, while their black Neoprene soles and uppers render them oilproof. The knitted nylon tops are silicone coated and water repellent, while their heavy foam rubber insulation adds warmth. The 28-cm front zippers assure quick on-off operation. Charcoal grey in colour, flying boots are available in sizes 4 to 13.

Flyer 4591G12

Top cold weather protection for transport personnel and all who require regular shoe overshoes is provided by Acton's Flyer. Made of brown split-leather sewn to a rubber bottom, the Flyer is genuine-shearling-lined and has two slide fasteners for quick on-off action. It is available in full sizes from 6 to 13.

Mukluk Flyer 4094G11

Designed for use with cold weather flying suits, Acton's Mukluk Flyer is similar to the army mukluk except its heel and sole area has been reduced to accommodate flying clothing and aircraft controls. The boot features a black rubber moulded sole and heel bottom integrally vulcanized to a polyamid black upper with eyelets and lace closure and 2.5-cm-width leather strap. This ankle strap prevents boot loss during high-speed ejection. For effective cold weather protection, the Mukluk Flyer must be used in conjunction with duffle socks and insoles. It is 22 to 24 cm high and available in sizes 6 to 14.

Combat Overshoe 3080G11, bright finish, Combat Overshoe 3083G11, matte finish

Designed to complement the Canadian Infantry's combat clothing system, this Acton model fits over combat boots in cold and wet conditions. Black, 28-cm high, the waterproof overshoe features a medium-coarse, knurl-design outsole with a high resistance to abrasion. Other properties include a full bellows tongue under its front-slide fastener, lower part insulation, nylon tricot insole cover and inside back strip for quick donning and doffing. All components are cemented and vulcanized under the differential pressure-cure system. The combat overshoe size range encompasses full and half sizes from 5 to 14. Other lasts and finishes are also available.
