

- b. "Aircraft" ground service support and maintenance equipment specially designed for use with "aircraft" which have previously been exported in accordance with the Committee's procedures, except pressure refuellers, pressure refuelling equipment and equipment specially designed to facilitate operations in confined areas. The Committee will approve the export of any equipment described in this Note if no member country has filed an objection within 8 weeks of the receipt of complete information on the case.

2011. Electronic equipment not embargoed elsewhere on this List specially designed for military use and specially designed components therefor.

NOTE:

This Item includes:

- a. Jamming and counter-jamming equipment, including electronic counter measure and electronic counter-counter measure equipment (i.e., equipment designed to introduce extraneous or erroneous signals into radar or radio communication receivers or otherwise hinder the reception, operation or effectiveness of adversary electronic receivers including their counter measure equipment);
- b. Frequency agile tubes;
- c. Electronic systems or equipment designed either for surveillance and monitoring of the electro-magnetic spectrum for military intelligence or security purposes or for counteracting such surveillance and monitoring;
- d. Underwater counter measure, including acoustic and magnetic jamming and decoy, equipment designed to introduce extraneous or erroneous signals into sonar receivers;
- e. Data processing security equipment, data security equipment and transmission and signalling line security equipment, using ciphering processes;
- f. Identification, authentication and keyloader equipment and key management, manufacturing and distribution equipment.

2013. Armoured or protective equipment and constructions, as follows:

2013. a. Armoured plate;
- b. Combinations and constructions of metallic and non-metallic materials specially designed to provide ballistic protection for military systems;
- c. Military helmets;
- d. Body armour, flak suits and specially designed components therefor.

NOTES:

1. Sub-item b. includes combinations of metallic and non-metallic materials specially designed to form explosive reactive armour or to construct military shelters.
2. Sub-item c. does not embargo conventional steel helmets not equipped with, modified or designed to accept any type of accessory device.
3. Governments may permit, as administrative exceptions, the shipment of personal protection equipment for police or security personnel.
4. The Committee will favourably consider the export to the People's Republic of China of:
 - a. Homogeneous armour plate;
 - b. Equipment embargoed by sub-item d.

The Committee will approve the export of any equipment described in this Note if no member country has filed an objection within 8 weeks of the receipt of complete information on the case.

2014. Specialised equipment for military training or for simulating military scenarios, specially designed components and accessories therefor.

NOTES:

1. The term 'specialised equipment for military training' includes military types of attack trainers, operational flight trainers, radar target trainers, radar target generators, gunnery training devices, anti-submarine warfare trainers, flight simulators (including human-rated centrifuges for pilot/astro-naut training), radar trainers, instrument flight trainers, navigation trainers, missile launch trainers, target equipment,

drone "aircraft", armament trainers, pilotless "aircraft" trainers and mobile training units.

2. This Item includes image generating and interactive environment systems for simulators when specially designed or modified for military use.
3. The Committee will favourably consider the export to the People's Republic of China of military training equipment as follows:

- a. Basic operator and maintenance training equipment formilitary equipment that has been approved for export to the People's Republic of China under the Committee's procedures and not containing any capability for the evaluation of, and real-time response to, operator performance under conditions simulating live tactical situations;
- b. Sub-calibre training equipment, limited to that specially designed for weapons previously approved for export to the People's Republic of China under the Committee's procedures; (For training rounds for this equipment, see Item 2003.)
- c. Mechanical targets for use on land or at sea (including radio control versions) incorporating none of the following features:
 1. Inertial navigation;
 2. Encryption of command and control information;
 3. On-board sensors other than simple miss distance indicators and platform state measuring devices for preprogrammed autopilot;
- d. Aerial targets, including towed targets, having all of the following characteristics:
 1. Maximum payload of 150 kg;
 2. Maximum effective one-way operating range of 200 km;
 3. No inertial navigation system;
 4. No encryption of command and control information; and
 5. Not using on-board sensors or equipment other than:
 - a. Miss distance indicators, direct-hit counters;
 - b. Simple devices intended to enhance the infrared or electromagnetic signature of the aerial target; or
 - c. Platform state measuring devices.

The Committee will approve the export of any equipment described in this Note if no member country has filed an objection within 8 weeks of the receipt of complete information on the case.

2015. Imaging or countermeasure equipment, as follows, specially designed for military use, and specially designed components and accessories therefor:

NOTE:

This Item does not embargo first generation image intensifier tubes.

2015. a. Recorders and image processing equipment;
- b. Cameras, photographic equipment and film processing equipment;
- c. Image intensifier equipment;
- d. Infrared or thermal imaging equipment;
- e. Imaging radar sensor equipment;
- f. Countermeasure or counter-counter measure equipment for the equipment embargoed by sub-items a. to e.

(See also Category 1061.2.a.2. and 1061.2.b.)

NOTES:

1. The term 'specially designed components' includes the following when specially designed for military use:
 - a. Infrared image converter tubes;
 - b. Image intensifier tubes (other than first generation);
 - c. Microchannel plates;
 - d. Low-light-level television camera tubes;
 - e. Detector arrays (including electronic interconnection or read out systems);
 - f. Pyroelectric television camera tubes;
 - g. Cooling systems for imaging systems;
 - h. Electrically triggered shutters of the photochromic or electro-optical type having a shutter speed of less than 100 microseconds, except shutters which are an essential part of a high speed camera;
 - i. Fibre optic image inverters;
