White lead, Brandram's No. 1 B.B. 7 100 bs

The first thing he was going to talk about was hens. He went to England to see about hens and had investigated the subject of poultry raising in both England and France. He said Canada was fifty years behind Europe in the profession of Agriculture. The prosperous farmers of in the profession of Agriculture. The prosperous farmers of both England and France raised hens. He visited a farmer in southern England, a wealthy farmer, who did not know where Canada was, but knew about hens. He would not at first show his methods, believing Prof Robertson was a local man trying to steal his secrets. Finally, however, he had gained his confidence. The man kept 500 dozen shickens on his farm, and his neighbors about him kept chickens. This man also kept chickens for fattening. He described the process of fattening. He described the process of fattening. At first they were put in coops to keep shout him kept chickens. This man also kept chickens for fattening. At first they were put in coops to keep them clean, and fed at first three times and afterwards twice on finely ground cats and skim milk of the consistency of thin gruel. The last ten days a pound of tallow was added for each fifteen chickens and they were fed by a fording machine. The hundred and fifty chickens could be fed in an hour and the chickens gained from two to two and a half pounds from the process, which was not an unhealthy one. When fat, the farmers informed him, they were killed by wringing their necks, plucked dry and sent to market without being drawn, as they were previously starved 24 hours and therefore head nothing in them. For these he received on an average 34 cents a piece. The birds were principally Plymoth Roeks, Dorkiugs and other breeds. He believed in the future the large percentage of food in England would be ham and cold chicken.

When he (Roberbean) got home ham de an experiment and bought 111 chickens. These he cooked by steaming, and removed the flesh, which he found waighed just 2 pounds 6 ounces and was of a mach better quality. In a government and suggistion of the field of the field of each chicken.

At Carleton place the increase in proving vermin, which was by rubbing a little sulphur under the wings and the field for each chicken.

At Carleton place he increase in proving vermin, which was by rubbing a little sulphur under the wings and the field of each chicken.

At Carleton place he increase in the ment of the field of each chicken.

At Carleton place he increase in the field of each chicken.

At Carleton place the increase in weight had cost 6c a pound. From this station some cases had been exported to England via St John. They had cost for a soch; the feed had costalt each, the had increase in the field of each chicken.

At Carleton place the increase in cost of \$1.06 esch. In Eng.

Seech, freight 22c each, a cost of \$1.06 esch. In Eng.

Seech freight 22c each, a cost of \$1.06 esch. In Eng.

AUTICULTURAL MEETING, that they could be made here cheaply. The great safeguard was in starving them sufficiently so nothing would be left in the intestines.

Only a Fair Attendance at Board of Trade Rooms

To Hear Professors Robertson and Shutt, of Ottawa,

Discuss Agricultural Demands.

The stiendance at the meeting of the Board of Trade, Thursday, was only fair. Mr D J McLaughlin occupied the chair.

Prof Robertson being introduced said: Instead of talking about the generalities of commerce would talk of the competitive values of the animals and their handling, which he said he would try to show were of vital interest to St John. Trade, he pointed out, was founded on agriculture. To sustain this he pointed out that the value of the product of Can'da last year were as follows: Fisheries \$30,000,000; foresies, \$60,000,000; agriculture was therefore of prime importance to people of St John. England was therefore of prime importance to people of St John. England was the great market, he said. It was unnecessary to show this, but he said last year were exported \$5,000,000 own they of agriculture products to the United States and \$66,000,000 to Greats Britain.

The greatest future for St John was in the increase in the exportation of farm products.

The \$7 rst thing he was going to talk about was hens. He went to England GULCH.

HARDSHIPS OF SKOOKUM GULCH.

He was from the Klondike. He had

fance of keeping herself well and strong in a womanly way. Nearly all of the pains and sickness and suffering of women is due to disorders or disease of the organs distinctly feminine.

A woman who suffers in this way is unfitted for wifehood and motherhood. Maternity is a menace of death. Thousands of women suffer in this way because their innate modesty will not permit them to submit to the disgusting examinations and local treatment insisted upon by the average physician. These ordeals are unnecessary. Dr. R. V. Pierce, an eminent and skillful specialist, for thirty years chief consulting physician to the Invalids' Hotel and Surgical Institute, at Buffalo, N. V., has discovered a wonderful remedy with which women may treat and speedily cure themselves in the privacy of their own homes. This medicine is known as Dr. Pierce's Favorite Prescription. It acts directly on the delicate and important organs concerned. It makes them well and strong. It allays inflammation, heals ulceration, soothes pain and rests the tortured perves. Taken during the critical period, it banishes the usual discomforts and makes baby's advent easy and almost painless. Thousands of women who were once weak, sickly, nervous fretful invalids, are now happy, healthy wives, because of this medicine. It is sold by all good medicine dealers and no honest dealer will advise a substitute.

"When I commenced using Dr. Pierce's medicines some three years ago," writes Mrs. Ella I. dealer will advise a substitute.

"When I commenced using Dr. Pierce's medicines some three years ago," writes Mrs. Ella J. Fox, care of W. C. Fox, of Eldorado, Saline Co., Ills. "I was the picture of death. I had no heart to take anything. Weight was 125. My husband had been to see five different doctors about my trouble (female weakness). I commenced taking Dr. Pierce's medicines, also wrote to him for advice. I took four bottles of Dr. Pierce's Favorite Prescription, and one vial of his 'Pleasant Pellets,' and am now a well woman."

GAME WARDEN BURPEE IS RUNNING DOWN POACHERS.

game warden for Sunbury, has sent his deputy, I Warren Day, to Northfield to investigate a case of reported infraction of the New Brunswick game law. If reports are true this is a most flagrant reports are true this is a most flagrant case. The story goes that some young men ran down a fine mouse till the poor animal could go no further, having become completely exhausted by wallowing several miles through four feet of snow, when he became an easy prey to these lawless hunters. During the open season, viz: September, October, November and December, these noble animals, the mouse and cariboo, have a fair chance to survive over the akill and experience of lawful and honorable nunters, but later on in the close season, esperience of lawful and honorable nunters, but later on in the close season, especially at this time of the year when the snow is deep and hard, any fair snow shoer having no fear of the law can run them down, especially the moose, in a few hours.

The upper part of the parish of Northfield, back of Dorsey', would, it unmolested out of season, soon become well stocked with big game, but if we may believe the rumors that are being circulated, these ruthless pot-hunters if allowed to continue their disgraceful practices, will shortly destroy the hunting grounds and the moose, cariboo and deer will speedily become extinct.

tinct.

It is to be hoped that Warden Burpee will make an example of these young men, if proof can be discovered. STANLEY GOLD FIELDS.

new settlement has been carved out of the primeval forest. It is not only rural in aspect but the natives perhaps fear-ed that civilization would come upon them too suddenly, and wipe away every trace of the original condition of things. To prevent this they named the village Greenhill. There for some years reposed the virgin gold hidden away in the rocks Silurian—there hidden away for years was a poet of the wild and wooly west type.

But as the gold came to the surface so did the poet and that he may come forth into the sunlight of popular favor THE TELEGRAPH OPENS its columns to the ollowing:-

THE STANLEY GOLD FEVER. B'gosh, the people's got the fever, An' it's got the under hold; Their minds are gettin' yaller Thinkin' of this land of gold.

They do not work at all now, But ear, an' sit, an' hum, An' talk o' golden nuggets An' the mine they say will come.

They've talked an' talked about it Till it's got an awful pitch, While everyone's a-buyin' claims, A-thinkin' they'll get rich. They've got the fever pretty bad, An' it's ketchin', too, I'm told, An' no medicine will help it— Nothiu' but a dose of gold.

They say they've formed a syndicut To make the gold mine boom, An'says within a month or two There won't be standin' room. Of course they can't dig gold yet For ther seven feet of anow; They'll have to wait till bare ground Or take their duds an' go.

ON THE ICE. Seal Hunters Adrift and Cannot be

Seal Hunters Adrift and Cannot be Rescued.

Strong John's, Nfid, March 30—All attempts to rescue the two seal hunters who are adrift on the ice in Conception Bay are unavailing. They have been beyond reach for 48 hours. The sealing steamers Panther and Labrador are both jammed in an ice fice at King's Cove, in the district of Bona Vista. Each is carrying a full load of seals. The loe fices have been driven against the whole northern coast, and thousands of seals are being taken by residents along the shore. The prospects in this respect are the best that have been knownfor years,

ST. JOHN, N. B.

MARINE ENGINEERS. Submitted.

At the last regular meeting of the St John Branch of the Canadian Marine Engineers Association held in their hall, Temple of Honor building, North End, the report of Messrs W J Barton and A Foster, delegates to the convention held

ly according to the number of members. They also decided to hold their first meeting at Montreal as soon as possible after the close of next season's navigation. One of their first duties will be to draw up a constitution for the guidance of the order in general, each primary organization being allowed to make byla we peculiar to their own locality.

The object of the association is to advance the standard of marine engineers scientifically and practically and to endeavor to induce the coming marine engineer to a higher profisiency in his calling, as this seems to be necessary in view of the great strides that are being made in marine engineering of today,

English people are serving baked potatoes in shallow wooden potato bowls. A woman who has been visiting in England recently came home filled with deland recently came home filled with delight at the new idea of these pretty potato bowls. She described them to a
friend who does beautifal work in earying and burnt wood, and the latter hasmade a number of them. She is a Northampton (Mass.) woman, who took a
thorough course of this work in Philadelphis, and was one of the most accomplished graduates of the school there,
