At this season of the year there is usually a quite period. This is approach-ing now and conditions may be quiet till after harvest. WHEAT

WHEAT

The statistical position of wheat is strong and if this alone governed prices, values would be high. The world's stock of wheat on June 1st was estimated at 129,000,000 bushels. This shows a reduction of about 60,000,000 bushels during April tion of about 60,000,000 bushels during April and May, and is the smallest since 1903. But these figures count for little with a big crop almost assured. Already this year's winter wheat is being marketed in the South Western States and harvest will soon be in full swing in all the fall wheat areas. There is, therefore, no chance of
