

concerns the life of mankind in the one corner of
the whole world. This is a matter of 8th interest for
the economic contact & transformation is going to
be - we have seen economic barriers raised against
it in China, but today we can say that effort
has not succeeded, & that China in next try will
be revolutionized by Western Economic ~~the~~ methods
in China, & too in Africa at present time. The
1st question there between 1st & 2nd interest is shall
modern econ. methods have free play there, but
believe that in one case or the other there will be
a barrier to economic forces. No barrier can
check individual energy it goes out prospecting etc.
& as long as this goes on you can't keep back
the Western civilization (that point results well in
another matter) so we come in the 2nd division
of the course to another main idea - we saw
the laying foundation - then we came to a point of
discovery & now we come to a point of invention.
These are the 3 main things in economic life
in Europe since break up of Roman Empire. In
this life of invention. Up to the lead, all along
we have taken the life as it has taken the lead,
but the leader in the 18th C. & just at that time
you have had taking the lead in the matter of invention.
