THE NEW PHARMACOPEIA  
 OF THE UNITED STATES

Contains certain new preparations, and requires greater purity in nearly every case.

Anticipating a large demand for really first-class LABORATORY PRODUCTS, which shall meet the strictest requirements of the new Pharmacopœia, we have greatly increased our MANUFACTURING FACILITIES, and can now offer a large line of proper strength and purity.

SPECIALTIES:

*Fluid Extracts.*

In accordance with the new requirements, each centimetre represents one gramme of powdered drug, or each minim represents 95-100 grain of powdered drug. As the strength of these preparations has not been materially changed, the doses need not be changed. Our Fluid Extracts are made by repercolation without heat, of full strength, and from good materials, with solvents adapted to the individual drugs.

*Solid Extracts.*

Excessive heat is avoided, and these extracts fully represent the soluble active constituents of the powdered drug.

*Powdered Extracts.*

Of the same strength as the Solid Extracts, and in many cases more convenient for dispensing. Our line includes all for which there is a demand.

*Abstracts.*

A class of Powdered Extracts introduced into the new Pharmacopœia. One grain of Abstract represents two grains of powdered drug. DOSE:—One-half that of the drug, or one-half as many grains as the dose, in minims, of the fluid extract. The simple relation between the dose of drug and of abstract, will, we believe, commend this new class of preparations to physicians. We can now furnish a considerable number of abstracts, and will manufacture all for which a demand arises.

*Scale Preparations.*

All scales containing Quinine, Strychnine, or other alkaloids, are assayed by our Chemist, and we guarantee them to contain the full amount of alkaloid stated on the labels. We call especial attention to the following:—

*Citrate of Iron and Quinine, U. S. P.*—12 per cent. Quinine, no Ammonia, slowly but completely soluble in water; color, ruby-red.

*Citrate of Iron and Quinine, Soluble.*—10 per cent. Quinine, with Ammonia, very freely soluble in cold water; color, light green.

*Citrate of Iron and Ammonium, U. S. P.; Citrate of Iron and Strychnine, U. S. P.; Citrate of Iron, Quinine and Strychnine.*—10 per cent. Quinine, 1 per cent. Strychnine with Ammonia.

All other scales of the Pharmacopœia.

*Miscellaneous.*

Purified Salts, Bisulphate of Quinine, Sweet Spirits of Nitre, Iron Preparations, Purified Chloroform, Pepsin, Oleates, etc.
