Matynia proboscidea.
Fraxinus Americana.
Acer saccharinum.
Quercus.
Heracleum lanatum.
Alyssum.
Oenothera.
And others.

Also numerous microscopic preparations of plant tissues.

- (9) A LARGE NUMBER OF BOTANICAL PLATES belonging to the Museum may be consulted on application to the lecturer in the Department of Botany. They have been removed from the walls on account of the action of light on their color.

N.B.—Some preparations, presented by various friends of the School, and not yet permanently mounted, will receive a place in the next edition of this Catalogue.

The Curator would feel obliged if any gentlemen who have contributed specimens, and whose contributions may not have been duly acknowledged in the Catalogue, will draw his attention to the fact, and give the numbers of the specimens, or otherwise describe or identify them, so that all such omissions may be rectified in the next edition.

He would also ask all future contributors to send with specimens short histories to be entered in the "Case Book" of the Museum, kept for that purpose; and he would be glad to receive, for the same purpose, histories connected with specimens already in the Museum.
