

## Valves on Dominion Oxygen Cylinders Do Not Leak

**W**HEN you order a tank of Dominion Oxygen, you get a cylinder filled to capacity—just the way it left the plant. There are no leaking valves dissipating oxygen into the air instead of conserving it for efficient welding and cutting at the blowpipe's tip.

The wedge valve on a Dominion Oxygen cylinder has been perfected in design and construction after years of careful study. It is your assurance of a full tank and no waste. Forged from bar stock, it resists the wear of internal friction and reseats itself while the tank is fully charged and in use—truly a money-saving feature.

This non-leaking valve is only one of the many evidences of the good service rendered by Dominion Oxygen to its customers.

To secure uniformly pure oxygen in lightweight cylinders with efficient valves, shipped to you the same day that your order is received, order a sample cylinder today from our nearest Distributing Station.

*Our price is right. Our service is right—be sure to let us quote you before ordering your supply, and you will be sure of getting the best possible prices and service obtainable.*
