

The plan of having a single size applicable to a wide range of rail weights and heights is a valuable feature of Hayes Derails. It vastly simplifies ordering and stock keeping. For instance, size 5 of any model may be used on any ordinary rail from 4 to 6 inches high, which limits include most of the rails in common use.

The sliding type may be operated by any mechanism which is used to throw a switch; it works in with existing conditions in any track without special attachments.

25,000 Hayes Derails are now in use on over 300 roads. They are made in Canada at Hamilton, Ontario.

Address: Hayes Track Appliance Co., Geneva, N.Y.
