

A New Book By a Mining Engineer

Published April, 1914

Compressed Air

Production—Transmission—Use

By THEODORE SIMONS, E.M., C.E.

Professor of Mining Engineering, Montana State School of Mines
Member American Institute of Mining Engineers.

173 pages, 6x9, fully illustrated. \$1.50 (6/3) net, postpaid.

The author's aim has been to give such insight into the natural laws and physical principles underlying the production, transmission and use of compressed air, as shall enable the reader to comprehend the operation of various appliances and judge of their merit.

He does not attempt to give extensive descriptions of existing types of compressors, but only examples which illustrate the principles, and which enable the student and investigator to solve the theoretical problems arising in the use of compressed air.

If You Were Denied College Training

but have reached a place where something of the kind seems necessary to your further advancement in the mine, the mill, the shop or the smelter, you should know about the special short courses which the

Michigan College of Mines, at Houghton, Mich.,

is offering this year, arranged with particular reference to your needs.

They are short, practical courses in mining, metallurgy, drawing, mapping, concrete construction, and many others.

Write the president of the College, telling him what part of the year you can attend, what your work has been, and what you wish to do.
