

Uric Acid?

OF BACKACHE, ISM, GRAVEL DEN DEATH.

discovery of uric acid Scheele, in 1775, and had upon the body, physicians have striven to remove it from the blood and the blood of the system. It causes here and there, rheumatism, neuralgia and Dr. Pierce who discovered it, called "Anuric," out and completely from the system. It has proved to be 37 times more potent than lithia, and need no longer fear the effects of uric acid. Send to Dr. Pierce's Hotel and Sanatorium, N. Y., for a bottle of "Anuric Tablets," or send 10 cents for "Anuric Tablets." Not tired, worn-out, or if you are troubled by too frequent uric acid, send your best drug store a bottle of Anuric Tablets. In 50-cent packages, reputation is back of it. You know that this is the "Discovery" for the "Anuric Prescription." Men have had a splendor in the past fifty years.

Pellets are unequaled in the tiny sugar-coated pills. Sick Headache, Dizziness, Constipation, Bilious Attacks, and of the Liver, Stomach

IRE'S PICTURES.

Something Else No could Paint.

picture of nature's which has returned to and again, and if it canvas or fastened old forever remain a t. And yet it was on heron standing in current of a brook and bright wavelets its slender legs and ass trembling beside it enough, at full of its bank, so that he I gazed, opened a ke, over which a swirling with an effect of the, shaking tail flag, razor flies about the whole effect was tilting, with a subtle and somewhere just re one might dream rever.

ist might easily have seen so far as paint- out would have been as yet to be born a sketch the hint of the just beyond the None but the most could have been able sweet, quiet key of ret be satisfied with ing outlines and the shadows. The liquid d color in the brook dusily to my senses, motion of swaying headed waves, that seen through half red to be a half fan- of the spirit of calm p in some tide of romance. — Maurice

ELECTRICITY.

Should Be Used In All Fixtures.

nk nothing of touch- ers a 110 volt or 220 switch to ascertain e or not," says the enter. "On the other in a number of n record that 110 ed for ordinary light- fied to produce fa- man being. To Keep Suet.

Take out any skin there may be and then put the suet in a saucepan and place on a warm but not hot fire and let it melt gradually. When quite melted pour it into a pan of cold water. When quite hard wipe it dry, wrap it in white paper, and when wanted for use it may be rubbed on a grater.

To Purify Sinks and Drains.

To one pound of common copperas add one gallon of boiling water and use when dissolved. The copperas is deadly poison and should always be carefully labeled. This is one of the best possible cleansers for pipes, closets and drains.

MAKING UMBRELLAS.

The Work of Assembling the Frame and Putting on Covers.

In most umbrella factories the work of turning out ribs and stems is left to other factories making a specialty of those parts. These are sent to the manufacturer, and the man whose work it is to assemble the parts inserts a bit of wire into the small holes at the end of the ribs, draws them together about the main rod and adjusts the ferrule.

In cutting the cloth or silk seventy-five thicknesses or thereabouts are arranged upon a table at which skilled operators work. In one department there are girls who operate hemming machines. A thousand yards of hemmed goods is a day's work for one of these girls. The machines doing this job attain a speed of some 3,000 revolutions a minute. After the hemming has been done the cloth or silk is cut into triangular pieces with a knife, as before, but with a pattern laid upon the cloth. The next operation is the sewing of the triangular pieces together by machinery.

The covers and frames are now ready to be brought together. In all there are twenty-one places where the cover is to be attached to the frame. The handle is next glued on, and the umbrella is ready for pressing and in spection.

EARLY RAILROAD FLIERS.

When the Threat of Twelve Miles an Hour Was Called Nonsense.

When the first passenger railroad ever built was opened in England in 1825 the train traveled from one end of the line to the other, a distance of twelve miles, in two hours. And Wood, one of the best known writers on the subject of railroads at that day, wrote as follows:

"Nothing can do more harm to the adoption of railways than the promulgation of such nonsense as that we shall see locomotives traveling at the rate of twelve miles an hour."

Today, with locomotives traveling at the rate of seventy-five miles an hour, one can look at Wood's warning with a feeling of amusement.

In 1829 a locomotive was introduced in this country, and in the following year Peter Cooper experimented with a locomotive on the B. and O. railroad. The flues of the boiler were made from gun barrels. The boiler was about the size of a four barrel.

Cooper related with considerable satisfaction how on the trial trip of this wonderful engine he passed a gray horse attached to a wagon.

Always the Unknown.

Permit me to introduce myself. You have been on intimate terms with me for some time.

And yet you do not know me. You have talked with me on long walks and in the still watches of the night. You have flattered me and cajoled me and pleaded with me and condoned me. And yet you do not know me.

The worst of this is that you will never know me. You will always go on believing that you do. This is your fate.

I am the unknowable. I am the one you live with and of whom you are destined, so long as you live, to be in absolute ignorance.

I am the one you think you are!

Preparedness.

"What was the date of Columbus' discovery of America?" an examiner asked.

"Fourteen ninety-two," the bright boy replied instantly.

"Right," said the examiner. "And why was that date important for you to remember?"

"Because I knew you would be sure to ask it," the bright boy said.

An Office Cushion.

If those of you who have a husband or brother or sister working in an office will go to the trouble of making a flat cushion for the chair of the worker you will find that it saves the trousers or skirt from getting shiny and also helps to retain the garment in form.—Good Housekeeping.

Older Still.

"It makes a chap feel rather old to meet the grown son of a former college mate."

"That's so, but if he tries to make love to the grown daughter of a former college chum she'll make him feel older still."—Birmingham Age-Herald.

The Right Kind.

"Modern steamers are floating hotels."

"Do they employ the bell boys?"—Baltimore American.

Corrected.

"We have a large ladies' waiting room in our new store."

"And none for the small ladies?"—Boston Transcript.

BLOUSES OVER SKIRTS.

Vivid Chat About the Very Latest Kinds of Waists.

Many and varied are the lines of the new blouses; possibly the most noteworthy feature is the peplum or skirt sections which are seen on many of the new models. To be sure, these peplumed blouses were introduced some time ago, but they have not attained the wide popularity which they would seem to deserve as pleasingly different and affording splendid opportunity for effective trimming.

New blouses of this type are of crape, taffeta and satin, and when in matching color with the separate skirt give the appearance of smart dresses that eliminates one of the chief objections to separate blouses and skirts—that of giving the figure a cut in half look that is disastrous to the average figure.

A very striking example of this peplum blouse is of taffeta, the wrist length sleeves set in at a drop shoulder line; the peplum a straight gathered one about eighteen inches long and the sleeves and bodice generously trimmed with tiny buttons. Still another feature is the draped or hoodlike collar of the blouse material.

Striped silk used on the bias is another fashion feature, and an interesting blouse made thus is finished as a basque and is to be worn without a belt or girdle. Most of the dressy washable blouses and many of the silk and crape ones are enhanced by effective hand embroidery, for the vogue of this attractive trimming is now assured.

Sleeves are long or short as one prefers in dresses and blouses and set into regulation extended or drop shoulder armholes, so you see fashion is kind just now and does not restrict us to one and only one style. Probably there will not be a narrowing of new fashion features, such as was the case a few years ago. Women do not like to be dressed like an aggregation of twins, and we have come to know that there is not one particular fashion that suits us all to perfection.

Hope for the Chronic Dyspeptic.—Through lack of consideration of the body's needs many persons allow disorders of the digestive apparatus to endure until they become chronic filling days and nights with suffering. To these a course of Parmelee's Vegetable Pills is recommended as a sure and speedy way to regain health. These pills are specially compounded to combat dyspepsia and the many ills that follow in its train, and they are successful always.

Ancient Preservation of the Dead.

Herodotus gives a good description of the manner in which the early Ethiopians preserved their dead.

Having thoroughly dried the corpse, they plastered it over with a paste made of gypsum and then painted the face and exposed parts so as to make them look as natural as possible. Dead bodies served in this manner remained intact for hundreds of years.—London Globe.

Aptly Described.

"I have been courting her for two years," said the disconsolate one, "and I am certain that she will refuse me when I propose."

"Ah, that is interesting," said the amateur photographer—"a sort of undeveloped negative."

Defined.

"Freddie," said the teacher, "can you tell me the meaning of the word 'desert'?"

"Sure I can," replied Freddie. "Desert is the stuff you get a little bit of for eating a whole lot of things you don't like."

As the Years Go By.

The letterhead of a certain lawyer bears a legend that savors of sound philosophy. It runs, "I am anxious for business, but have passed the experimental age and am now demanding cash for my services."—Case and Comment.

Emotional Acting.

"You acted Juliet as if you were really suffering."

"I was. I played the part in a pair of very tight shoes."—Philadelphia Bulletin.

Depends.

"Is bolting a refining process, pa?"

"That depends, my son, whether it is done in flour mills or at the table."—Baltimore American.

There's nothing half so good as laughing. Never sigh when you can sing.—W. Mackworth Praed.

It Bids Pain Begone.—When neuralgia racks the nerves or lumbago cripples the back is the time to test the virtues of Dr. Thomas Electric Oil. Well rubbed in it will still the pain and produce a sensation of ease and rest. There is nothing like it as a liniment for its curative properties are great. A trial of it will establish faith in it.

CHAPPED HANDS AND COLD SORES

Are your hands chapped, cracked, or sore? Have you "cold cracks" which open and bleed when the skin is drawn tight? Have you a cold sore, frost bite, or chilblains, which at times makes it agony for you to go about your duties? If so, Zam-Buk will give you relief, and will heal the frost-damaged skin.

Miss B. Stojas, of East Hantsford, N.S., writes: "My hands were so badly chapped I was unable to put them in water. All remedies failed to heal until I tried Zam-Buk. Perseverance with this balm completely healed the sores."

Zam-Buk heals cuts, burns, bruises, eczema, piles, chapped hands, cold sores, frost bites, and all skin diseases and injuries. Refuse substitutes. At all druggists and stores. 50c box.
