

light yellow color in the berries exposed to the light, changing to a greenish shade on the other parts of the cluster. The attractive appearance of the fruit will doubtless give it a prominent position as a market variety. In flavor it compares favorably with other varieties which show the characteristics of the *Labrusca* family; it is sweet, rich, and possessing the peculiar musky, or, as it is sometimes called, "foxy" flavor, which marks the Hartford Prolific, Diana, and to some extent is also present in the Concord. The berries were hanging well to the cluster on the vines, giving no evidence there of any tendency to drop from the bunch when ripe, like the Hartford Prolific.

The colored lithograph which embellishes this number, is presented to our readers by Messrs. Morris, Stone & Wellington, who have done so much in the way of introducing this grape to Canadian fruit growers. In size, both of bunch and berry, it is a good representation of the fruit, and the color is probably as accurate as can well be produced in chromo-lithography. We did not see any bunches where the berries were as uniformly yellow as in the plate, more or less of them having a greenish tint on the shaded side. It is probable that in the colder parts of the Province that tint will be found to predominate even when the grape is ripe.

We look upon this grape as worthy of trial in all those sections at least where the Concord will ripen. To those who are fond of the musky flavor of our *Labrusca* grapes, combined with much sweetness, large size, and showy appearance, this variety will be a welcome addition.

ANOTHER SEEDLING GRAPE.

We received from Mr. C. H. Biggar, of Drummondville, samples of a new seedling grape raised by him—parentage unknown. The grapes were received about the middle of October, and as stated in the letter accompanying them, were over-ripe. In size they were a little larger than the Delaware, and deeper in color, but in many respects resembling the Delaware in appearance. We were favorably impressed with the quality of this grape, and hope that we may see it again another season when in its best condition. Mr. Biggar states that it was in its prime about the 24th September, and that the vine gives promise of being a very heavy cropper.
