Kola=Cardinette

KOLA-CARDINETTE combines in an elegant cordial the tonic stimulating action of Kola, the vitalizing and reconstructive properties of Phosphates obtained from Cereals, and the therapeutic value of Cod Liver Oil. It is now generally conceded that Cod Liver Oil owes its medicinal value not to its fatty constituents, but to its alkaloids.

While occupying a similar therapeutic sphere, Kola possesses a pre-eminent advantage over Coca, inasmuch as its administration is never followed by depressing after effects as is frequently the case with the latter drug. It has been used with marked benefit in Neurasthenia and in all Nervous disorders due to deficient nerve tone. In such cases it is a stimulant without reaction and a permanent Nerve tonic. In Atonic Dyspepsia and in Diarrhoea, **KOLA-CARDINETTE** has proved very effective by restoring muscular power to the digestive tube. **KOLA-CARDINETTE** is also a valuable and powerful general stimulant and tonic in all conditions of Depressed Vitality, in Convalescence and in Alcoholism. Dose 1 to 4 tablespoonfuls 4 to 6 times a day. Samples sent on application.

Borolyptol

Owes its remarkable antiseptic virtue not to any one of its ingredients alone, but to the germo-zymocidal power of a combination of agents which exercises both an inhibitory and destructive effect upon all varieties of micro-organisms and their spores. This will be readily seen from a consideration of its formula, which is herewith given.

Formula of "BOROLYPTOL."—Contains in a delightful and permanent form, 5 per cent. Aceto-Boro Glyceride, 0.1 per cent. Formaldehyde, in combination with the active antiseptic constituents of Pinus Pumilio, Eucalyptus, Myrrh, Storax, Benzoin.

"**BOROLYPTOL**," while it is a powerful enemy to germ life, is absolutely non-toxic and non-irritant to the tissues. It possesses a fragrant balsamic odor and a pleasant flavor, and is devoid of staining properties. It can, therefore, be safely and effectively employed whenever an antiseptic fluid is indicated in Gynecology, Rhino-Laryngology, Ophthalmology, Otology, Surgery or Dentistry, and internally as an intestinal antiseptic in Typhoid Fever, etc.

A sample of "**BOROLYPTOL**," together with a more extended treatise on its properties and therapy will be sent to any physician upon request, by
