The show is gone, but its influence is still with us. A mother on Flores street this morning found her two sons, nine and twelve years old, preparing to shoot their three-year-old sister from a cannon improvised from a flour barrel. The boys had procured powder, which they made into a cartridge, and the little girl squatting patiently in the barrel awaited with solemn fortitude the return of her brother from the kitchen with a coal of fire to touch off the piece of hooped ordnance. A sheet had kitchen with a coal of fire to touch off the piece of hooped ordnance. A sheet had been swung from the clothes-line and pegged to a log of wood to shoot the child against, and she was swaddled in a damp coffce-sack to protect her from the flash of the powder, of which the certridge contained two ounces, and unless the little innocent hung on a nail inside the barrel (many of which stuck in from the hoops) it is probable that there would have been a double act, embracing besides the rôle of a projectile the leap through the canvassed hoop.

The great results which have attended the regular use of Quinine Wine, by people of delicate constitution and those affected with a general prostration of the system, speak more than all the words that we can say in its behalf. This article is a true medicine and a life-giving principle—a perfect renovator of the whole system—invigorating at the same time both body and mind. Its medical properties are a febrifuge tonic and anti-periodic. Small doses, frequently repeated, strengthen the pulse, create an appetite, enable you to obtain refreshing sleep, and to feel and know that every fibre and tissue of your system is being braced and renovated. In the fine Quinine Wine, prepared by Nos throp & Lyman, Toronto, we have the act tonic required; and to persons of we and nervous constitutions we would a never be without a bottle in the house, is sold by all druggists. ocws will produce 6,000 pounds, on an average.

The value of a cow, measured for factory cheese production, is determined by the pounds of milk she yields, and may be looked at wholly from this standpoint; in which case nothing less than 6,000 pounds should be satisfactory. The cheese dairyman has then a simple standard of selection—merely the yield of milk—and the sale milk dairyman has the same standard. This is very easily determined with a pair of spring scales hung in the stable, with a book having a name or number for each cow; and by weighing and entering the milk of each cow in the book one day in a week, the average of these weighings will give the average of these weighings will give the average of these weighings will give the average yield per day, near enough for all practical purposes. Can't a dairyman afford to take this small trouble to learn the individual character of his cows, when profit or loss depends upon it? A cow that yields only 3,000 pounds, at five or six years old, should be got rid of as a pauper that lives on your charity and refuses to work. Only heifers with the first calf can be tolerated with so low a yield; and the prospect is not favourable even with the heifer. She should yield 4,000 FOR A BUTTER DAIRY.

Sir, —In the report from the Ontario Experimental Farm, in your valued paper of 14th inst., I was astonished at the wise men attempting to fatten two-year-olds, costing \$45.50 apiece, on palm nuts, and paying \$15 for bedding.
