SPHC A L'I'I ES

Introduced to the Profession by

PARKE, DAVIS & CO., Detroit, Mich.

Sanguis Bovinus Exsiccatus. DEFIBRINATED BULLOCK'S BLOOD, (DESIC-Smith, Physician to St. Luke's Hospital, New York, and subsequently investigated by F. E. Stewart, Ph. D., M.D., of the same city, who utilized the product by desiccation. Popularly employed as a remedy for consumption, etc., by invalids who drink it at the abattoirs, as it dows from the freshift slaughtered animals. As a sustaining and supporting measure it supplies nitrogenous tissue waste, obviates the tendency to death by asthenia, and forestalls a degree of prostration dangerous to life. As a restorative agent, it is indicated in the slow convalescence from fever, in wasting diseases of various forms, consumption and the like, in eachestic states from various constitutional poisons, as syphilis, scrotula, etc., and in all cases where impaired blood, nerves or diges-tion, give rise to the anemic condition, with its resulting general debility, hypochondrissis, or other functional disorder. As a eutotice agent, in atonic dyspepsia, anamia, and various derangements of nutrition and secretion. For a description of the process of manufacture, etc., in detail, please send for circulars.

ų,

Bromide of Ethyl. (HYDROBROMIC ETHER)—chemically pure. The new anæsthetic. This article has been used for producing anæsthesia, with very satisfactory results, in short, it possesses many advantages over chlordorm, ether, and other agents heretofore in use. It is powerful, rapid in action, and, and, comparatively a safe anæsthetic, we would still advise care in its use by those unfamiliar with its properties, and will be pleased to furnish circular containing report of case by Dr. J. Marion Sima, in which dangerous effects followed its use.

Jamaica Dogwood. (PISCIDIA EKYTHRINA). The reports which have already been received profession of this country. Making due allowance for the enthusiasm which its action has aroused, we would only say, that, whereas, we a short time since merely asked the profession to submit it to a trial, we are now justified in recommending it as a substitute for opium in many painful affections. Its advantages over opium lie in its not constipating or locking up the secretions, and in its leaving none of the unpleasant constitutional effects associated with the administration of opium.

Manaca. (FRANCISCEA UNIFLORA.) This drug is officinal in both Brazilian Dispensatories in which it is classed among alteratives of the more active and positive kind. So marked is its effects in the syphilitic cachexia, that it has been called *mercuric vegetal* by the Brazilians. It is recommended also as an anti-rheumatic, relieving the pain and materially shorteding the natural course of the disease. We ask for it a thorough trial, under the bellet that it will prove a valuable addition to the list of remedies commonly employed in rheu-matism. It is regarded by the Brazilians as almost a specific in the chronic form of the disease.

We are just in receipt of a direct importation of this rare and expensive drug. Extract Duboisia. We are just in receipt of a direct importation of this rare and expensive drug. Duboisia, although scarcely two years before the profession of this country, has already largely supplanted atropia, formerly regarded as indispensable as a mydriatic, in the practice of ophthalmology. Its action on the eye is similar to that of atropia, dilating the pupil and paralyzing the muscles of accommodation, but is much more prompt, and is atten-ded by more of the disagreeable effects of that salt, irritation of the conjunctiva, dryness of the throat, and in children, hallucinations, delirium, etc.

Gelatine Products. We would ask the especial attention of the medical profession and pharmacists to our line of gelatine and gelatine-coated preparations, comprising Empty Capsules, Improved Rectal Suppository Capsules, and Gelatine-coated Pills. Our facilities for the manufacture of these articles are unsurpassed and the perfection to which we have brought them is due to the sparing of no expense in the securing of the best methods and the most expense in the securing of the best methods and the most expense in the securing of the best methods and the most expense in the securing of the best methods and the most expense in the securing of the best methods and the most expense in the securing of the best methods and the most expense in the securing of the best methods and the most expense in the securing of the best methods and the most expense in the securing of the best methods and the most expense in the securing of the best methods and the expenditure of much capital. We claim for it complete freedom from the objections which attached to all the methods previously employed.

Gelatine Capsules. The desirability of some neat and expeditious method for the administration of bitter or nauseous drugs, will be particularly manifest to physicians during the spring months, in which the demand for quinte, especially in malarial districts, is large. By using our capsules the disagreeable drug may be completely obviated, and the patient saved the disturbance arising from nausea and repugnance. The desirability of some neat and expeditious method for the administration of

Capsule Fillers. Te enable us to supply the physician with the means of utilizing to the fullest degree agency for two very ingenious capsule files, known respectively as Davenport's and Whitfield's. With one of these instruments, capsules may be filled in much less time than it would take to prepare powders or to make pills. Send for full descriptive circular of these instruments.

FOR SALE BY ALL WHOLESALE DBUGGISTS.

In corresponding with advertigers please mention the CANADA LANCET.
