

You Ought To Know About Steel Ribbed Fire-Pots

Any invention that will save you from $\frac{1}{8}$ to $\frac{1}{3}$ in fuel, is a pretty important subject to the man who is going to put in a new furnace this summer.

The "Hecla" Fire-pot has three times the radiating surface of any other because it has 97 steel ribs fused into the castiron (count the flanges or pins in your present furnace). This increase in radiating means a corresponding increase in the amount of heat given off by the fuel. By actual tests extending over three years,

The "Hecla" Furnace

saves from $\frac{1}{8}$ to $\frac{1}{3}$ of the fuel.

Every one of the "Hecla" Furnace steel ribs radiates heat. They also throw off the heat so rapidly that the Firepot never becomes redhot, cannot burn out, and should be practically everlasting.

We can't tell you all the points of "Hecla" Furnaces, here. Our new catalogue contains them, explains them and illustrates them.
