

LIST OF ILLUSTRATIONS

FIG.		PAGE
	1. The Arrangement of the Fibres of the Intercolumnar Ligament	9
	2. Another Common Arrangement of the Fibres of the Intercolumnar Ligament	9
GE V	3. The Skin Incision	23
	4. The Incision in the External Oblique	24
	5. Exposure of the Internal Oblique.	26
	6. The Internal Oblique retracted to bring into view the Spermatic Cord enclosed in its Sheath	27
1	7. Peeling off the Cremaster	28
	8. Separation of the Sac from the Vas and the Spermatic Plexus	29
21	9. The Sac completely isolated. The Neck has been transfixed and ligatured	31
41	10. The Wound in the External Oblique Sutured	33
	11. Retraction of the Spermatic Cord to show the Posterior Wall of the Inguinal Canal. Mattress Sutures are seen between Poupart's Ligament and the Conjoined Tendon	35
50	12. The Wound in the External Oblique is closed. The Suture has been continued downwards to approximate the Pillars of the External Ring.	36
66	13. Diagram to show how the Transplanted Testicle is kept in position by the Septum of the Scrotum	73
89	14. The Neck of the Sac has been ligatured and the Sac has been separated below as far as the Tunica Vaginalis	75
99	15. The Sac has been ligatured below and removed. The Gubernaculum and lower part of the Tunica Vaginalis have been ligatured, but the Attachments of the Gubernaculum have not been torn through	77
	16. Showing the Incision on the opposite side of the Scrotum. The Gubernaculum has been ligatured and torn through. The Ends of the Ligature are secured by Spencer Wells' Forceps	78
	17. The Spencer Wells' Forceps have been passed through the Inguinal Canal and the Points with the Ends of the Ligature are presenting through the Septum of the Scrotum into the Incision of the opposite side	80
