Those Bilious Attacks come from a Disordered Liver. Surely you know the one infallible remedy for sluggish, torpid liver.

Abbey's Effervescent Salt

tones up—strengthens—invigorates the liver—prevents you from ever being bilious.

Equally good for stomach and bowel troubles. And is the ideal summer tonic for young and old.

At all druggists. 25c. and 60c. a bottle.

COL. McLEAN CHOSEN IN QUEENS-SUNBURY

Dr. Hetherington Retires and Col. McLean's Nomination is Made Unanimous—Hon. Mr. Pugsley the Principal Speaker at Gagetown Convention.

At a Liberal convention at Gagetown Thursday, Col. H. H. McLean, of St. John, was unanimously chosen as the candidate for Sunbury-Queens at the next federal election. The convention was largely attended, every parish in the two counties being represented. Speeches were delivered by Hon. William Pugsley, minister of public works; Hon. C. W. Robinson, the premier; Hon. L. P. Farris, Col. McLean and others.

The convention was held in the court house, which was crowded, and opened a little before two o'clock. Cecil McLean, vice president of the Liberal Association, took the chair in the absence of Hon. Charles Burpee, the president.

As soon as the meeting was called to order Dr. Peake, of Oranmore, nominated Col. McLean. E. L. Perry of Johnson parish, nominated Dr. J. E. Hetherington, of Cady's. Dr. Hetherington, however, at once rose and asked that his name be withdrawn. He referred to the convention having been hurriedly called, and made complimentary reference to Col. McLean, who, he said, was his personal friend. He had no objection to his nomination and would prefer that his own name should not be put forward.

The chairman then put Col. McLean's name to the meeting and it was adopted unanimously. Col. McLean, in a brief address, thanked the electors for the honor they had bestowed on him and said he looked for the success of the Liberal party in Queens-Sunbury when the election was brought on.

Hon. Wm. Pugsley was the next speaker. After referring to the circumstances which led to his accepting the portfolio of public works, he dealt with some charges brought against him by Mr. Hazen and members of the opposition. He said that the other day, when speaking at Bathurst, Mr. Morrissey had stated that the provincial treasury had been plundered to the extent of \$48,000 by the statutory general in the last six years. When last a somewhat similar statement had been made on the floor of the legislature he had pointed out that the amount was \$41,000, but \$7,000 was apparently there for the purpose of carrying out the constitution, and of that sum \$25,000 was employed in one county alone in New Brunswick.

Mr. Kemp, speaking recently in Toronto, had asked why, as he was attorney general, he did not prosecute. Why, if they had prosecuted all the tories more would have been in the province. Mr. Foster had followed Mr. Kemp and said that it was all bluff on his (the speaker's) part. Mr. Foster said it out to be, perhaps for Mr. Kemp's benefit as he was a religious man and was not acquainted with the game of poker. Mr. Foster apparently could claim some familiarity with it. He (Mr. Pugsley) had been told that in the game of poker it was not always necessary to put all the cards down on the table.

He would tell them that this \$25,000 which was sent to New Brunswick, came through a bank in Montreal, \$5,000 of it on Oct. 24, 1904 and \$20,000 on Oct. 27. It was wired to the partner of the candidate in the Conservative interest. These facts were disclosed a few weeks ago in the course of certain legal proceedings. He would not put up any plea of privilege in this matter. It was a charge against all the managers of the Conservative party in Montreal and the lower provinces and in British Columbia. Mr. Pugsley then went on to speak in detail of the changes made in what was known as the Saskatchewan land deal. Criticizing Mr. Borden's tour, he said the leader of the opposition seemed to offer something to each province. In British Columbia he told the people that if he were returned to power he would appoint a commission to investigate the claim for better terms. He (Mr. Pugsley) would be surprised if Mr. Whitney, who was present at the conference, remained silent under what Mr. Borden had said.

In Saskatchewan and Alberta Mr. Borden had promised to give over certain lands and, speaking in the Northwest he promised to give land and money too. In conclusion Mr. Pugsley paid a tribute to Mr. McLean referring to his honorable record, his industry, and his honorable reputation. He felt sure that he would be able to work with Mr. McLean for the advancement of the constituency and the province.

Premier Robinson, Hon. L. P. Farris, Isaac Carpenter, M. P. P., and A. B. Cope, M. P. P., also spoke briefly and in a cheerful mood with cheer for the King, Hon. Mr. Pugsley and the premier.

MARCONI'S COMMERCIAL WIRELESS SERVICE OPEN

First Messages Sent Across the Atlantic From Cape Breton Station Yesterday.

Sydney, N. S., Oct. 17.—Through messengers of the world, the wireless service of the Marconi company sends greetings from Canada to the motherland across the sea, via the great Children today. The mind of the great Italian has solved the problem of sending messages out into illimitable space, and true as a magnet to the poles, speed in a given direction. Distance does not count with the famous Italian's new method of transmitting messages and by the simple touch of a trained hand on a telegraph key a message is sent coursing about the world to find its way to Ireland.

In a flash the receiver on the other side has caught the flying signal, and the dream of a single individual among us is realized and a new epoch is marked in the history of man's determined effort to conquer the practically untamed element of air.

A fall of preceding death overhangs the station at Port Moresby where the inventor and a few chosen friends were laboring under the mighty strain of preparation for the great feat which they have so successfully accomplished, while

PEOPLE OF NOTE

Adolphus W. Greely

Gen. Adolphus Washington Greely, Chief Signal Officer of the United States Army since 1887, was born at Newburyport, Mass., on March 27, 1844. He graduated from the college in his native town in 1860 and served throughout the Civil War. He married Miss Henrietta C. H. Nesbit in 1881. General Greely along in the 70s became much interested in the Polar explorations which had already been made and finally, in 1881, he himself headed an expedition toward the North Pole on the part of the United States Government.

He made a new record for the farthest north up to that time and brought back much valuable information of a scientific nature. General Greely makes his home in Washington, D. C.

to the connection room on the floor above, which is equipped with a medley of strange electrical contrivances. The use of cotton wool and smoked glasses became at once startlingly apparent. From the ceiling in duration to the assistant's touch of the key below, came three blinding flashes of blue white flame, followed by a sharp hiss. The two-sided mouth of the instrument likewise spouted eye-blinding flame of the same color and intensity. Simultaneously, the discharger, a few feet across the room, emitted similar blinding flames, and there came a wearing, tearing boom like the deep bass of some giant organ, but more incessantly cruder and louder. The duration of each note again corresponded exactly with the assistant's dot or dash on the instrument.

The fifty-two in number, are strung from the building into the aerial wire outside. These, fifty-two in number, are strung from the building into the aerial wire outside. These, fifty-two in number, are strung from the building into the aerial wire outside. These, fifty-two in number, are strung from the building into the aerial wire outside.

The history of wireless telegraphy in this country dates from 1901. In that year Marconi paid his first visit to this continent. St. John's (N.B.), being the field of his opening experiments. The apparatus used was of most crude description, consisted of a common kite flown high in the air, carrying a receiver, which it was hoped would record messages from the distant shore. For weeks the kite was sent up and watched carefully to record a signal, finally the news was flashed across the world that the letter S had been successfully caught from the station at Cornwall.

Directly the news became noised abroad that the new system was to be used as a factor in the commercial world, the Anglo-American Telegraph Company, who owned several cable lines on the east coast of Newfoundland, protested to the government of the ancient colony that they had a monopoly of the cable business of the island and when Marconi applied for a permit to continue his experiments the application was refused.

The finance minister of Canada stepped into the breach and sent a telegram to the inventor inviting him to come across to the water. The rate by C. P. R. is one cent per word up to 2,000 miles, a message straight through across Canada to any point on the Pacific coast costing \$1. Montreal, Oct. 17.—A special London cable says: "Marconi's wireless opened for business here today charging ordinary messages 2 1/2 p. per word, with a minimum of 5c. 6d. as against the cable rate of 15c. without a minimum and press messages 2 1/2 p. plus land line charges, which are on this side 1 1/2 p. per word. The cable press rate is 5d. I filed with Marconi at noon a sixty word message to Montreal. The manager sends me the following: "I will send you your message to London, but cannot guarantee that it will be transmitted today. We have only a limited service for the first day and cannot handle any quantity of matter from one source."

A director of one of the leading cable companies told me this morning that they were quite undisturbed and as yet felt no pinch, though he admitted it was not always wise to belittle a new rival. He admitted that if Marconi succeeded, at any thing like half the present rates, the old cable companies would probably have to bring the rates down, but he felt pretty confident that without the electricity and surety which is so essential in business the Marconi competition would be of small account.

The secretary of the Marconi Company states that they already have as many messages waiting dispatch as can at present be handled for the first week or so. "We are only working so many hours per day," he could not accept any more messages, but might be able tomorrow, adding that any message must not be over fifty words in length.

Iron; the Most Necessary Metal.

Children, when you see an old iron bolt, nail or hook you do not stop to think about the great importance of the metal below. This is the electrical discharger which sends oscillating electrical currents from the building into the aerial wire outside. These, fifty-two in number, are strung from the building into the aerial wire outside. These, fifty-two in number, are strung from the building into the aerial wire outside.

The same cannot be said of any other metal in existence. We could get along without gold, silver, tin and copper. While these metals are vastly useful the world could go on in its advancement without them, for there would be found a substitute for each.

We have no way of knowing just when this mineral first became known of, but it came into use probably soon after the stone age. As warfare dominated the mind of man at that remote period, it is only reasonable to suppose that iron was first employed in the making of weapons. The most ancient records mention the use of iron, and we have reason to believe that this most useful of useful metals was known many thousands of years before the Christian era. It is a recorded fact that among the earliest peoples iron was held as infinitely more valuable than gold.

To quote from one writer on the subject of iron and its many uses: "The most remarkable remnant of early iron in iron is the famous wrought-iron pillar of Delhi, which is supposed to have been erected in about the year 310 A. D. It is nearly 48 feet in height, 16 1/2 inches in diameter at the bottom and 12 inches at the top. It weighs about 17 tons. In a temple in India are iron beams of great
