Characteristics of the Scotch.

There is, of course, much in Scotland that i com con to British nature-much that is com mon to human nature in general. Were it not for the presence of such universal characteristics, Ans otle and Shakspeare could never have m pred out the territory of humanity with such wenderful success. But here is also much that usually, a d almost inevitably, arises in a smaller community which stands in close alliance with a larger one. When a nation, numbering only some three millions and a half of souls, is under the same government as a neighboring country with more than fitteen millions, the more populous country being at the same time (more than proportionably) richer, there will be a ten-dency in the smaller body to h ld together, as the only chance of retaining influence, and to be country, and, h If insensibly, to adopt much of its babits and general culture.

And now to come at length to details. The first point on which we propose to touch is that of the intense roughness of manner displayed by the lower classes of Scotch Lowlanders. We

portant difference, that the Scott, in since cases out of ten, employs them with perfect correcteness, while the Englishman, in almost similar control of the Englishman, in almost similar control of the Englishman control of t examples, which we know to be genuine. "Very wrong of her nut to write; keeping her husband in such a dispense." "I never tried to learn astronomy; it's such an obtuse science." Here, sir, are the pyrish a counts; on one I would cry, 'Up there, ads, and abake out that Mr. ___, please come and look at it ; I don't think it's at all detrimental to the dignity of the door,"

The Scotch are fond of general propositions, and seem naturally to throw incidental remarks into that shape. Many will remember Sydney int (if not vero, at any sate hen trowate) of the lady at the Edinburgh ball, discoursing to her partner: "Ah! my lord, what you say may be zerra true of love in the abbaract.

Touching the more ornamental process of gardening, it is enough to remind our readers that for more than a century past, the head gardener of English nobles and sentry has been continually found to be of Northern origin.

But it would be most unjust to conclute this imported and fragmentory account of the social imported and fragmentory account of the social characteristics without adverting to the nobe independence displayed by the Scotish rural poor, under the pressure of want. We are well aware that all parts of England are now ell aware that all parts of England are now the social in this respect; but, in a gene al way, the Scotch seem to us, far less willing to begin the natives of South Britisin. We remember staying in a West-Anglian district, where machinery had seriously affected the gains of the poor. Now, that under the first operation for Bulk Mals and Plot Cloths:
