Methods Of Growing Tomatoes

Tomatoes should be kept growing from the time the seed germinates until the fruit is ripe. If sown in the hot-bed very early they are likely to receive an injurious check when held back until it is safe to plant them out. When the seed is sown about the middle of April the seedlings are ready to prick out into flats about the 10th of May and should be ready to set out immediately after the early June frost, which usually occurs in Prince Edward Island the first week in June. They are ready to prick out into the flats when they have the third leaf. In setting them out they should be planted so that the first leaves are about level with the ground. A little clay may be mound ed around them to protect them from the wind.
 Any good garden soil is suitable for tomatoes. It is usually best to delay manuring the plants until after the first fruit has set. Most amateurs make the mistake of planting in soil that is too rich in nitrogenous manures which produces great vines with late fruit or a very large percentage of green fruit. Once the fruit has set, then liquid or other forms of manure may be applied generously.
 A series of experiments were conducted with two varieties, "Bonny Best" and Sparks Earliana, for several years at the Charlottetown Experimental Station, to determine the best method of growing tomatoes. Five methods were used with each variety as follows: No. 1. The plants were set four feet apart each way and the plants allowed to spread over the ground. They were unpruned and left lying on the ground.
 No. 2. Planted two feet by four feet apart. The tomatoes were pruned to two stems and tied to wires.
 No. 3. Planted two feet by four feet apart. The tomato plants were pruned to one stem and tied to stakes.
 No. 4. Planted two feet by four feet apart, pruned to one stem and tied to wires.
 No. 5. Planted two feet by four feet, pruned to one stem, tied to stakes and one half of the foliage removed during the ripening period.
 The first method produced the greatest quantity of fruit each year with both varieties. The tomatoes were later ripening than with the other methods and the total quantity of ripe fruit from the plot was less than on the plots grown by the second method, where the plant were pruned to two stems and fastened up with wires. The second method gave the largest returns of ripe fruit. This was closely followed by method No. 3, which produced the most early ripe fruit though not the greatest total quantity. The removal of the foliage in method No. 5, decreased the quantity of both ripe and green fruit, but greatly increased the percentage of ripe fruit on the plants.
 Large quantities of tomatoes can be produced by planting four feet apart each way with the least amount of labour. A good percentage of ripe fruit can be obtained if the plants are not supplied with nitrogenous manures until after the tomatoes have set. The method that was most successful in producing ripe fruit early in the season was that of tying the plants to stakes placed two feet apart in the rows.

Ask For Removal Of Burden Of Tax Collecting
 Ottawa, May 31—The burden of collecting the "discriminatory and confusing" luxury tax, which they consider "ill-advised, poorly conceived and poorly devised," was asked to be removed from their shoulders by the retail merchants of Canada at a special interview with Sir Henry Drayton, minister of finance, in the Chateau Laurier this morning, at which 200 retailers from all over Canada were present. Instead of making the retail merchants collect the tax, they asked that it be collected at the source of supply, namely from the manufacturer and importer, and absorbed in the same manner that all systems of taxation are absorbed. Full sympathy and co-operation with the government was expressed by the retailers through Henry Watties, Ottawa, who acted as chairman of the meeting.
 Sir Henry Drayton listened for an hour and a half to the reading of the memorandum which had been prepared and to a dozen or more speakers representing the various sections of the retail trade who voiced the objections to the luxury tax.
 In replying he did not answer any specific objections, nor indicate if any change would be made in the budget proposals.
 One of the most interesting statements in Sir Henry Drayton's reply was: "In the interest of everybody, the government desire to check extravagance, and pull down the cost of living. Perhaps we are already setting our faces towards lower prices. The government wants to encourage efficiency in business. But we are not going on borrowing money."

Children Cry for Fletcher's

CASTORIA

Fletcher's Castoria is strictly a remedy for Infants and Children. Foods are specially prepared for babies. A baby's medicine is even more essential for Baby. Remedies primarily prepared for grown-ups are not interchangeable. It was the need of a remedy for the common ailments of Infants and Children that brought Castoria before the public after years of research, and no claim has been made for it that its use for over 30 years has not proven.

What is CASTORIA?

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other narcotic substance. Its age is its guarantee. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic and Diarrhoea; allaying Feverishness arising therefrom, and by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep. The Children's Comfort—The Mother's Friend.
