

LLOYD'S CANADIAN PATENT PLOUGH.—No. 4.

THE Subscriber begs to inform the Canadian Farmer in general, that he has constantly on hand an extensive stock of LLOYD'S CANADIAN IMPROVED PATENT PLOUGHS which are manufactured under the immediate inspection of the inventor, Mr. Lloyd; and which have given general satisfaction in every portion of the Province, where they have been used. It is the opinion of a number of the best ploughmen in the Home District, that Lloyd's Improved Ploughs will ultimately supersede the Scotch Wooden Ploughs, on account of their cheapness and durability. In every section of the Province where the various patterns of the common Patent Plough are in use, the agriculturists in those localities, would find it tend greatly to their interests to purchase "Lloyd's No. 4, Patent Plough," as it is acknowledged on all hands to be an admirable implement for ploughing sward, or any other description of work. The mould board, wrought iron, and wood work, are very similar to the most approved Scotch Plough, and the shears are hardened in such a manner, that they will wear much longer than wrought-iron laid with steel.

The above Ploughs will be supplied to order, at either wholesale or retail, on very reasonable terms.

REVOLVING DRYING KILN.

THE Subscriber begs to inform the Millers,
Merchants, and the Public generally, that he
has, at considerable labor and expense, invented
and completed a Machine for DRYING Wheat,
Oats, Barley, Indian Corn, or any other Grain
necessary to be dried before being manufactur-
ed: and he assures them, that it is the cheapest
and most expeditious mode of Kiln Drying Grain
now in use. This Machine will dry from thirty
to sixty bushels of grain per hour in a most perfect
manner. It is so constructed, that the grain passes
through the machine, from thence to the rolling
screen, where it is cooled, in a fit state for manu-
facturing. This machine requires very little power
to keep it in motion, and may be driven by a small
strap from any wheel in the mill. A quarter of a
cord of hardwood will produce heat sufficient for
drying a thousand bushels of grain.

The Subscriber begs to inform the public, that
he has obtained a Patent for his Machine, which
extends through the United Province of Canada,
and that he is prepared to manufacture the above
Machines to order, or dispose of the right to per-
sons desirous of manufacturing or using the same.

Any further information on the subject may be
had, by addressing the Subscriber. All commu-
nications (post-paid) will be immediately replied to.

HIRAM BIGELOW.

Tecumseth, Bond Head P. O.,
February 15th, 1844.

DESCRIPTION.

Composed of a Cylinder about ten feet long,
and ten inches in diameter, made of Cast Iron,
one-half of an inch in thickness, having an iron
shaft passing through its centre, on which it
revolves with a pulley or wheel at one end, by
which it is put in motion. The Cylinder is
placed in an oblique position, having about 13
inches fall, and is enclosed either in another
metal cylinder, or a brick arch, of thirteen inches
diameter, leaving a space of one inch and a half
between the two cylinders, through which space
the fire is conducted from a fire-place or grate,
at the lower end, and passes out by a chimney
at the upper end. The grain is conducted by a
tube into the upper end of the inner cylinder.
